Professional Summary

A competent professional with **12+** years of experience as an **Azure Devops Engineer** and different domains in technology. Projects completed successfully with quality products and delivered on time within budget.

- Good knowledge of Cloud services integration among **Infrastructure as a Service (IaaS) and Platform as a Services (PaaS) and Software as a Service (SaaS).**
- Expertise in Architecting and Implementing Azure Service Offering, such as **Azure cloud services**, **Azure storage**, **IIS**, **Azure Active Directory** (AD), **Azure Resource Manager** (ARM), **Azure Storage**, **Azure Blob Storage**, **Azure VMs**, **SQL Database**, **Azure Functions**, **Azure Service Fabric**, **Azure Monitor**, and **Azure Service Bus**.
- Hands on experience on Backup and restore Azure services and in Design and configure **Azure Virtual Networks** (VNet), **subnets**, Azure network settings, DHCP address blocks, DNS settings, security policies and routing.
- Experience in Azure Role-based access control policy (**RBAC**) with support for Azure Active Directory
- Experience in provisioning new resources using Azure Resource Manager templates (**ARM Template**) and **Terraform.**
- Migrated On-Premises Data Systems (ETL & DWH) to **Azure Cloud Data Platform** using various azure resources like **ADFs, Azure Databricks, Blob Storages**.
- Experience in automating day-to-day activities by using Windows **PowerShell** and **Azure CL**.
- Experience filtering network traffic with a **Network Security Group** and route network traffic with a route table using the Azure portal.
- Experience in Setting up Application Tier, Build Controllers, Build Agents in Azure DevOps Services | Azure DevOps Server 2019 | TFS 2018 | TFS 2017 | TFS 2015 | TFS 2013.
- Set up different kinds of **Build triggers** including – **Gated** –**Checking**, **Continuous Integration**, and Rolling Builds in **Azure DevOps Server** and **VSTS**
- Designed **Cloud Formation** templates to create custom sized **VPC, subnets, NAT** to ensure successful deployment of Web applications and database templates.
- Working extensively on **Microsoft Azure Data Factory**, **Azure Synapse Analytics.**
- Experience in Developing Notebooks using **Azure Databricks, Spark, and Python**
- Strong in preparing the Release documents to **QA & Production** Environments
- Implemented a complete automated build-release solution using a combination of technologies like **Maven, TFS, Jenkins**
- Experience in setting up CICD pipeline integrating various tools with Jenkins to build and run **Terraform** jobs to create infrastructure in **Azure.**
- Proficiency in using **Docker Hub**, **Docker Engine**, **Docker images**, **Docker Weave**, **Docker Compose**, **Docker Swarm** , and **Docker Registry** and used containerization to make applications platform when moved into different environments.
- Excellent **problem-solving skills** with a strong technical background and good interpersonal skills.

Technical Skills:

Public & Private Cloud Technologies	Microsoft Azure, Amazon Web Services (AWS)
Containerization Tools	Docker, Docker Swarm, Kubernetes, AWS ECS, Apache Mesos, OpenShift

Configuration Management	Chef, Ansible, Puppet, Salt Stack, Terraform
CI/CD Tools	Azure DevOps Services | Azure DevOps Server 2019 | TFS 2018 | TFS 2017 | TFS 2015 | TFS 2013, Jenkins, Bamboo, GitLab CI, Travis CI
Build & Testing Tools	Maven, Ant, Gradle, Travis CI, Bamboo, TeamCity, CircleCI,
Web Servers	Apache Tomcat, Nginx, WebSphere, WebLogic, JBoss, Samba, SQL Server
Databases	Dynamo DB, MySQL, RDBMS, NoSQL, Cassandra, PostgreSQL, Mongo DB, Oracle DB
Scripting/Programming Languages	C#, YAML, Bash, PowerShell
Operating Systems	Windows, UNIX, LINUX, Red hat, CentOS

Role: Senior Azure Devops Engineer **Oct 2023 – Till Date**
Client: Santander Consumer USA

Accomplishments:

- Implemented **CI/CD pipelines using Yaml Templates** in Azure DevOps for artifact migration deployments in different environments.
- Implemented **APIGEE CI/CD pipeline** setup, configuration management, and assisted development team for any issues.
- Spearheaded the artifact migration of **legacy to new semantic** CI/CD processes to Azure DevOps.
- Successfully planned and executed the **migration of Azure DevOps Server 2020** to Azure DevOps Services.
- Proficiently utilized **Azure DevOps Migration Tools** to migrate repositories, pipelines, work items, and artifact.
- Submitting change tickets in **service now** to L2 prod team for release activity.
- Creating changes tickets in **service now to DevOps** team for deployment activities during release
- Utilized Azure DevOps built-in **debugging** tools and features, such as pipeline logs, test results, and diagnostic data, to **troubleshoot** and resolve issues efficiently.
- Proficiently employed Azure Synapse Analytics, Hive, Spark SQL, and Azure SQL Database along with Python client libraries to create efficient and interoperable programs for analytics platforms.
- **Integrated Azure DevOps CI/CD pipelines with AKS** to automate application build, test, and deployment workflows, achieving efficient and reliable release cycles.
- **Monitored AKS clusters with Azure Monitor and Prometheus**, implementing alerts and dashboards to track performance, resource utilization, and detect anomalies for proactive infrastructure management.
- **Troubleshot and** resolved issues within AKS clusters, utilizing tools such as kubectl, Azure CLI, and Kubernetes dashboards to identify root causes of application and infrastructure failures**.**
- Resolved issues related to pipeline configuration, such as **incorrect YAML syntax**, missing dependencies, and misconfigured environment variables.
- Developed Extract, Load, Transform (ELT) processes utilizing diverse data sources including Azure Data Factory, Azure Logic Apps, and computing resources such as Azure Databricks (PySpark), Azure Data Lake Storage, and Azure Synapse Analytics.
- Successfully transitioned an Oracle SQL ETL process to operate on the Azure Cloud Platform, leveraging Azure Databricks, Azure Synapse Analytics, and Azure Event Hubs for orchestrating Data Factory jobs.
- Implemented naming conventions and guidelines for branches and repositories to promote clarity and consistency within development teams.
- Facilitated data transfer between Azure Synapse Analytics and Azure SQL Data Warehouse through Azure Data Factory (ADF) and devised complex DAX language expressions for memory optimization in reporting cubes within Azure Analysis Services (AAS).
- Integrated Nexus with CI/CD pipelines to streamline **the artifact management process**, enabling automated version control and artifact deployment.

Environment: Azure, ADO, Terraform, PowerShell, Git, Azure Data Factory, Azure SQL Database, Python, Power BI, Azure Databricks (PySpark), Azure Data Lake Storage Azure Devops Server (ADS), Docker, Kubernetes , TFS, CI/CD, YAML, VSTS.

Role: Azure DevOps Engineer

Client: CHUBB, Jersey City, NJ **July 2021 – Sept 2023**

Chubb is the world's largest publicly traded property & casualty insurance company, serving consumers & companies of all sizes.

Accomplishments:

- Deployed **Azure IaaS virtual machines (VM**s) and Cloud service (PaaS role Instances) into secure **VNets** and subnets using **PowerShell**.
- Automated the **Azure DevOps Service Connection** password rotations using PowerShell.
- Automated Azure resources provisioning using **Terraform**.
- Deploying **CI/CD system using Azure DevOps on Kubernetes** container environment, and for the runtime environment of CI/CD system to build, test, and deployment have been utilized.
- Using Shared Image Gallery to store the created Images and built **Azure pipelines in Azure DevOps** to implement all these services in **Azure**.
- Migration of On-Premises Data Systems to **Azure Cloud Data Platform using like ADFs, Azure Databricks, Blob Storages.**
- Development of data pipelines using **ADF, Azure Databricks**.
- Conducted and participated in design and code walkthroughs.
- Creation of tables in **Azure Data Warehouse**
- Developed Spark code using Scala and Spark-SQL for faster testing and data processing.
- Involved in preparing SQL and PL/SQL coding conventions and standards
- Developed Python utility to validate HDFS tables with source tables.
- **Deployed applications in AKS** using Helm charts, managing complex Kubernetes applications with streamlined, reusable configuration and simplifying the deployment process.
- Automated the provisioning of **self-hosted agents in ADO** using Packer and terraform scripts.
- Actively manage, improve, and monitor cloud infrastructure on Azure including patches, and **auto scaling**.
- **Configured CI/CD Pipelines** as Code with YAML in Azure DevOps.
- Created a Continuous delivery process to include support **building of Docker images** and publish into a private repository-Nexus V3.
- Developed the **yml files** to integrate the code scanning tools like SonarQube.
- Coded **Groovy domain classes** to handle business logic.
- Added **Groovy composers and Views** to the project.
- Storing data in Data Lake using Delta Lake Storage format and leverage the advantages of using delta lake.
- Integrate traditional **SSIS Packages with ADF pipelines**.
- Worked on **publishing the NuGet packages** to multiple artifact locations like Azure Artifacts and NuGet org.
- Automated the artifact **signing process using PowerShell modules** and some internal tools.

Environment: Azure, Office 365, Terraform, Azure Data Bricks, python, SQL, Grrovy, SSIS, **Azure Data Warehouse** Azure ADF, PowerShell, Git, **Kubernetes**, Docker, VSTS.

Client: Microsoft, Bellevue, WA **January 2021 – June 2021**
Role: Azure Cloud DevOps Engineer

Microsoft Corporation is an American multinational technology corporation. Microsoft's best-known software products are the Windows line of operating systems, the Microsoft Office suite, and the Internet Explorer and Edge web browsers.

Accomplishments:

- Worked on configuring **Windows Azure IaaS** - Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Route, Traffic Manager, VPN, Load Balancing, Application Gateways, and Auto-Scaling.

- Work with application teams to identify necessary **Azure resources and automate** their provisioning using ARM Templates, PowerShell and Terraform scripts.
- Implemented **CI/CD with ARM deployment) pipeline** and automate application deployment process.
- Experienced working on **developing webApi using ASP.NET Core micro services** and integrated with front-end application using HTTP client API.
- Create plan for **Resource Groups and resource naming** as per the company's standard policy. .
- Major focus on **Configuration, SCM, Build/Release Management**, Infrastructure as a code (IAC) and as Azure DevOps operations Production and cross platform environments.
- Created **Ansible manifests, profiles, and roles** modules to automate system operations.
- Experience in **migrating on premises to Windows Azure** and build Azure Disaster Recovery Environment and Azure backups from scratch using PowerShell script.
- Modify the application **config files using JSON variables** and substitute the config file secrets with Azure Key Vault secrets within the VSTS release pipeline.
- Experience in **migrating on premises to Windows Azure** and build Azure Disaster Recovery Environment and Azure backups from scratch using PowerShell script.
- Setup **Hybrid connections between Azure cloud resources** and on-premises SQL databases.
- Automated the process **of installation, configuration of the Azure Resources** using Azure Power Shell scripts and VSTS tasks.

Environment: Azure, PCF, Office 365, Terraform, Maven, Jenkins, Ansible, Azure ARM, .Net, SQL, Azure AD, Azure Site.

Client: Ryder System Inc., Miami, FL **October 2019 – December 2020**

Role: Azure DevOps Engineer

Ryder is an American transportation and logistics company. It is known for its fleet of commercial rental trucks. Ryder specializes in fleet management, supply chain management, and transportation management.

Accomplishments:

- Worked in highly collaborative operations team to streamline the process of implementing security **Confidential Azure cloud environment** and introduced best practices for remediation.
- Gathering the requirements from the clients about the existing applications to apply the security measures.
- Involved in secure cloud & web applications with **.Net and Azure PAAS** technologies.
- Implemented **Azure Storage - Storage accounts, blob storage**, and Azure SQL Server. Explored on the Azure Storage Accounts like blob storage..
- Developed **automation scripts using PowerShell, Azure CLI, ARM Templates and Terraform** to remediate the Azure services.
- Implemented **automation for deployments by using YAML scripts** for massive builds and releases.
- Used tools like **Visual Studio Community Edition, Visual Studio Code, Power Shell ISE, and SQL** Server Management Studio.
- Assigned **RBAC Roles using Organization Active Directory Subscription Level** to grant accesses only to required members based on Least-Access Privileges.
- Modify the **application config files using JSON variables** and substitute the config file secrets with Azure Key Vault secrets with in the VSTS release pipeline.
- Configure **azure cognitive search API's and importing the searchable data** and metadata from an external Azure data source.
- Designed and created **Dockers images using Docker files**. Hand-on experience with Docker container snapshots and managed Docker volumes.

Environment: Azure, Terraform, Maven, Jenkins, Ansible, Azure ARM, Azure AD, Azure Site Recovery, SQL, Kubernetes, Python, Ruby, XML, .Net, Shell Scripting, PowerShell, Nexus, JFrog Artifactory, Jenkins, Git, Jira, GitHub, Ansible.

Client: Microsoft, Irving, TX **February 2018 – August 2019**

Role: Azure Cloud Engineer

Job Description: Working on product development related issues, research, investigate, and fix them with right resolution, also finding the root cause of the issue to avoid recurrences.

Accomplishments:

- Built good rapport by communicating well with **Global Azure** Customer and **Microsoft Partners**.
- Migrated moderate workloads from on premise to **Azure**.
- Experience sharing Product knowledge and updates with multiple teams across the world.
- Experience using **ARM templates** to deploy resources in Azure and troubleshooting the customer's Templates.
- Troubleshoot and resolve bugs in **.NET applications** to ensure optimal development environment.
- Implemented Security in Web Applications using **Azure** and Deployed Web Applications to **Azure**.
- Experience creating and managing resources in **PaaS** environment as well as **troubleshooting** and fixing **PaaS** technical issues.
- Helping customers understand the differences between **Azure Function Apps** & Web jobs by providing necessary suggestions in choosing the right resources to match their business requirements.
- Diagnosed different technical issues in **Web Apps** developed using different languages like **C#, java, php**
- Experience on monitoring **logs** of application using **Kusto queries**.
- Worked on **Microsoft Azure** Storage - Storage accounts, blob storage, managed and unmanaged storages
- Experience in **troubleshooting the portal issues and suggesting workarounds** until the issue is fixed.
- Resolved **Azure portal** related issues by collecting Network Traces and analyzing them.

Client: Corvesta, Roanoke, VA **March 2017 – Dec 2017**
Role: Cloud DevOps Engineer
Corvesta is dedicated to advancing oral health through scientific research, technology, and benefits and practice management.

Accomplishments*:*

- Experience in writing **Ansible playbooks by using YAML script** to launch AWS instances and used to manage web applications, configuration files, used mount points and packages.
- Virtualized the servers using the **Docker for the test environments and development environment** and performed configuration automation using Docker containers.
- Wrote **CI/CD pipeline in Groovy scripts** to enable end to end setup of build & deployment using Cloud Bees **Jenkins and Developed an end-to-end CI/CD Pipelines** in Jenkins to retrieve code, perform tests and push build artifacts to Nexus.
- Wrote **scripts for the build, deploy, maintain using Jenkins**, Git, Maven, Python, Bash and worked on CI/CD involving Run Deck Jenkins and Ansible to complete the automation from commit to deploy.
- Used **Git version control to manage the source code** and integrating Git with Jenkins to support build automation and integrated with Jira to monitor the commits.
- Integrated **Docker container-based test infrastructure** to Jenkins CI test flow and set up build environment integrating with Git and Jira to trigger builds using Webhooks and Slave Machines.

- Maintained **Jenkins continuous integration** tool using shell/Perl and ruby scripts for automating releases to different environments.

Client: Inmar, Hyderabad, India **Oct 2011 – Dec 2014**
Role: Azure Engineer

Inmar Intelligence is a leading data platform company. One hundred and twenty billion dollars of commerce runs through our market-driven platforms.

Accomplishments*:*

- Responsible for collaborating on and setting cloud vision; involved in thought leadership in cloud infrastructure and cloud services architecture to meet operational objectives for cloud solutions.
- Involved with leadership with the ongoing development of policies and procedures for the purpose of consistent product delivery.
- Implemented PowerShell scripts and ARM templates to automate the provisioning and deployment process.
- Participated in internal and customer meetings assisting with the ongoing evolution of technology offerings.
- Knowledge of monitoring, logging and cost management in a cloud environment Demonstrated leadership ability using progressive technology platforms.
- Involved on building solutions using Azure PaaS and other services.
- Troubleshoot and identify performance, connectivity and other issues for the applications hosted in Azure platform.

Certifications/Training

- **Microsoft Specialist:** Microsoft Azure App Service
- **Azure Fundamentals (AZ-900)**

Education details:

- **Master's Computers and Information System from California University of Management and Sciences in 2017, United States.**
- **Bachelors in computer sciences from Osmania University in 2011, India.**
