Anji K
Anji.kukatla0722@gmail.com
Sr MS Dynamics CRM Developer

PROFESSIONAL SUMMARY:

- 15 years of professional experience as a Microsoft Dynamics CRM Developer, with in-depth knowledge of Dynamics CRM 365, 2016, 2015, and 2013 related technologies.
- Successfully developed complex applications on the Microsoft Dynamics CRM platform, including customizing entities, writing client-side JavaScript, and implementing plugins and workflows.
- Proficient in developing custom WCF, Web API, and Web services, and integrating custom web pages into Dynamics CRM for seamless data flow and enhanced functionality.
- Extensive experience in interacting with MSCRM database using Web Service methods, ensuring secure and efficient data exchange.
- Hands-on experiences in developing Web/Windows applications using C#, ASP.NET, SQL Server 2008R2/2012 and .NET Framework 4.0/4.5/4.8, with a strong focus on Object-Oriented concepts and best practices.
- Designed and implemented ETL processes with SSIS, creating necessary data models and stored procedures to optimize data integration and transformation for various applications.
- Experience with Dynamics 365 Customer Engagement leveraging OData, ASP.NET Core API, .NET 6, JavaScript and XRM model, Dynamics SDK.
- Demonstrated expertise in Web Development skills like HTML, XML, JSON, JavaScript, jQuery, and Visual Studio versions 2012/2013/2015/2017/2019/2022, ensuring seamless integration with Dynamics CRM.
- Designed and implemented custom solutions in Dynamics AX to meet client-specific requirements, including creating and modifying forms, reports, and workflows.
- Managed the implementation of various Dynamics AX modules such as Finance, Supply Chain Management, and Retail, ensuring alignment with business processes and objectives.
- Successfully led a major Dynamics AX upgrade project that improved system performance and user satisfaction.
- Demonstrated expertise in MVC, Web API, and Entity Framework, implementing best practices to ensure maintainable and scalable applications.
- Integrated Dynamics 365 F&O with other systems, such as CRM, SharePoint, and third-party applications, streamlining data exchange and improving data consistency.
- Successfully led the upgrade of MSCRM 2016 on-premises version to MSCRM 365 Cloud version, adapting to newly added features and ensuring a smooth transition for end-users.
- Utilized Snowflake in CRM environment in order to centralize and analyze the customer data more effectively, driving better insights and improved decision-making.
- Experienced in utilizing Microsoft Power BI to create interactive and data-driven visualizations, enabling data exploration, analysis, and insightful decision-making for key stakeholders.
- Experience developing PowerApps and Flow using Power Platform
- Experience in Power Apps portal development, including jQuery, Liquid coding and external user's authentication.
- Owned CRM roadmap planning and advised leadership on phased rollouts, feature adoption, and Fusion Service Cloud upgrades.
- Integrated Oracle Service Cloud with ERP, identity systems, and third-party applications using Oracle Integration Cloud (OIC), REST/SOAP APIs, and event-based integrations.
- Created a few Power App Portals to expose CRM data to the external customers by providing login information and a PTO APP for internal office users for requesting the PTO's.

- Led the design and implementation of Entity Relationship Diagrams (ERDs) to depict the relation between different entities, optimizing data organization and retrieval processes.
- Knowledge on Integrating and setup Unified Service Desk Desktop applications for unified platform for Customer service representative.
- Used Databricks in order to enhance the data processing, analytics, scalability and integrating the data to derive the maximum value from the CRM data to make more informed business decisions.
- Utilized Azure App Service to deploy REST APIs, leveraging the scalability and reliability of Azure for seamless application deployment.
- Configured Azure App Service in Azure API Management (APIM) to manage and secure APIs effectively, providing a unified and user-friendly API experience for consumers.
- Implemented unified service desk which provides session management capabilities, enabling agents to handle multiple customer interactions simultaneously also Integrated unified service desk with various data sources, allowing real-time access to customer information, to enhance the decision-making and personalization of service.
- Utilized Microsoft Power Automate (Flows) to create automated workflows, integrating Dynamics 365 with other applications and services to streamline business processes and increase efficiency.
- Used Power Apps to allow the users to build custom dashboards and reports that provide insights into Dynamics 365 data.
- Utilized Dynamics 365 Project Operations to manage project budgets, monitor financial performance, and ensure accurate project accounting.
- Integrated Dynamics 365 Project Operations with other systems and managed data migration to ensure smooth data transfer and maintain data consistency.
- Proficient in leveraging Azure Blob storage to store Dynamics 365 attachments, ensuring efficient and scalable storage for large volumes of unstructured data such as documents, images, and files.
- Leveraged Azure Data Factory to orchestrate and automate data workflows, ensuring seamless data integration and analytics for business intelligence and reporting purposes.

TECHNICAL SKILLS:

ERP Technologies	Microsoft Dynamics 365, CRM 2016, 2015, 2013, 2011
Azure Services	App Service, API Management, Storage Accounts, Web Jobs, Function App, Logic Apps, Azure Service Bus, Azure Data Factory, Azure Data Lake, Azure Key Vault, Data bricks
.Net Frameworks & Others	ASP.NET, LINQ, C#.NET, .Net Framework, C#.NET, SQL, WebAPI
Technologies	HTML, CSS, JQUERY, Web Services, SOAP, REST, JavaScript, WSDL, XML, JSON, Sharepoint Online.
Data bases	SQL Server 2005/2008/2012/2014
Tools	XRM toolbox, Ribbon Workbench, KingsWaySoft, Microsoft Visual Studio
Reporting & ETL	Dashboards, SSIS- Kingsway soft, CRM Data tools, Fetchbase reports, SQL server reporting services SSRS
Methodologies	Agile, SDLC

PROFESSIONAL EXPERIENCE:

State Of VA (VDOT) **June 2025 –**
Role: Lead MS Dynamics CRM 365 /PowerApps Developer

- Developed and customized a **model-driven Power App** for managing the end-to-end lifecycle of sign fabrication, maintenance, and inventory tracking for the VDOT SignShop system.
- Designed and implemented **custom entities, business rules, views, and forms** in Dynamics 365 to reflect business workflows related to signage requests, approvals, and production schedules.
- Built **automated workflows using Power Automate** to route sign requests through various VDOT departments for validation, prioritization, and approval.
- Integrated the solution with **SharePoint and SQL Server** for document storage and real-time data reporting across sign shop operations.
- Developed role-based **security roles and access controls** to ensure compliance with VDOT data governance policies.
- Led data migration and data quality initiatives, including customer records, service history, and knowledge articles into Oracle Service Cloud.
- Acted as a CRM functional consultant and technical advisor, collaborating with business stakeholders to translate customer service needs into scalable Oracle Fusion Service solutions.
- Created **Power BI dashboards and embedded reports** to provide VDOT supervisors and engineers with insights into production throughput, material usage, and turnaround times.
- Participated in requirement gathering sessions with VDOT stakeholders to capture use cases, pain points, and performance metrics.
- Defined and enforced security roles, data access policies, and compliance controls within Oracle Fusion Service Cloud.
- Collaborated with QA and business analysts to design and execute UAT scripts and manage issue resolution during system testing.
- Provided strategic leadership for CRM transformation initiatives, aligning Oracle Service Cloud capabilities with business goals such as improved customer satisfaction, SLA compliance, and agent productivity.
- Ensured **compliance with federal/state transportation standards** by incorporating regulatory checks and validations within workflows.
- Provided documentation, training, and support to end-users across multiple VDOT districts during rollout.

Compass Group – Infosys **Sept' 24 – May' 24**
Role: Sr. MS Dynamics CRM 365 Developer/PowerApps Developer

- Worked closely with business stakeholders to gather requirements and map legacy sales processes to modern Dynamics 365 CRM capabilities.

- Implemented role-based security models, field-level security, and hierarchy-based access to match the client's organizational structure.
- Delivered CRM governance, standards, and best-practice frameworks to ensure consistency, scalability, and long-term maintainability of Oracle Service Cloud solutions.
- Provided technical documentation, conducted UAT sessions, and supported end-user training to ensure smooth adoption post-deployment.
- Played a key role in go-live planning, issue resolution, and post-launch support.
- Developed Power BI dashboards and embedded them within Dynamics 365 for real-time reporting and analytics across sales metrics and KPIs.
- Integrated the new CRM with Compass Food Group's ERP and marketing systems via Azure Logic Apps, custom connectors, and REST APIs.
- Assisted in implementing Sales Insights features (AI-driven recommendations, relationship analytics) to help optimize sales opportunities.
- Advised clients on CRM modernization, legacy system decommissioning, and migration to Oracle Fusion Service Cloud.
- Conducted code reviews, unit testing, and system integration testing (SIT) to ensure quality and performance.
- Estimated effort, defined scope, and supported project planning and delivery governance for Oracle Service Cloud initiatives.
- Prepared detailed technical documentation, user guides, and training materials for end users and support teams.
- Supported User Acceptance Testing (UAT), handled bug fixes, and provided post-deployment support during and after go-live.
- Collaborated with cross-functional teams including QA, infrastructure, and security to ensure a smooth and secure deployment process.
- Configure business process flows to guide users through predefined steps, ensuring consistent and streamlined execution of business processes within Dynamics 365.
- Conducted sessions for all implemented modules
- Utilize JavaScript, jQuery, and web resources to enhance user experience in Dynamics 365 forms and provide interactive and user-friendly interfaces. Develop fancy HTML pages for custom portal solutions or embedded web resources.
- Design and develop SQL Server Reporting Services (SSRS) reports to provide insightful and actionable business intelligence from Dynamics 365 data.

Verizon, TX. Jan' 23 – Sep' 24
Role: Sr. Power Apps Developer /MS Dynamics CRM Developer/Dynamic 365 Consultant

- Worked in all phases of Software Development Life Cycle (SDLC), identifying the requirements and defining the business rules to user requirements.
- Designing systems, modules & created business flowcharts to transform business requirements into technical specifications.
- Design backend databases, front end user interfaces and logical layers as per the business requirements.
- Developed data capture and navigation desktop and mobile apps in Microsoft Power apps that connect to distribution center solutions design analytics in Power BI.

- Developed Web Service Application Programming Interface (API) s for exposing functionalities to client applications.
- Developed data ETL modules using DAX and generated dashboards & reports for day-to-day distribution center performance monitoring.
- Used the Dynamics 365 Omni channel as a solution that integrates various communication channels like voice, chat, email, and social media into a unified platform for customer engagement.
- Set up Microsoft Flow (Power Automate) to provide auto-approval and status update features based on predefined criteria.
- Used Microsoft Dynamics 365 Field Service Management to streamline and optimize field service operations.
- Successfully delivered multiple high-impact projects on time and within budget, significantly improving Verizon's financial reporting and supply chain management capabilities.
- Developed canvas and model driven app.
- Developed custom services using ASP.NET Core Web API to extend Dynamics 365 CE functions.
- Gathered business requirement, designed and developed business applications using PowerApps, Flow, PowerBI, SharePoint Online, OneNote, and OneDrive and integrated the same with Dynamics 365.Used ASP.NET Core 7.0 as middleware for data manipulation in Azure SQL Database.
- Used the Canvas app drag and drop interface to easily design the app layouts and functionalities without writing any code.
- Used Dataverse in Dynamics 365 as it provides a flexible, scalable, and secure data platform that supports various business applications and processes.
- Worked on C#, Visual Studio, SQL Server, DAX queries, PowerApps Studio, PowerBI Desktop and Azure Analysis Services.
- I have extensive experience in designing and implementing Java MVC frameworks, with a particular focus on Struts MVC. My work involves creating robust and scalable web applications using the Struts framework, ensuring a clear separation of concerns and efficient request handling.
- In addition to my expertise in MVC frameworks, I have a strong background in Object-Relational Mapping (ORM) tools, specifically Hibernate and Java Persistence API (JPA). I utilize these tools to streamline database interactions, optimize performance, and ensure data integrity within applications.
- I have significant experience with Web Services, both RESTful and SOAP, which I leverage to enable seamless communication and data exchange between distributed systems. This includes designing and implementing APIs that facilitate integration with external systems and services.
- Expertise in managing all phases of the Software Development Life Cycle(SDLC) for CRM systems.
- Implemented FCM to automatically generate cases from various customer interaction channels.
- Used CRM Online in D365 to centralization the customer data, including contact information, , transactions, and preferences. By providing a unified view of customers across sales, marketing, and service departments.
- Created versioned packages for CRM customizations to facilitate easy rollbacks and maintain a history of changes.
- Used .NET framework in CRM Dynamics 365 as it provides a robust and flexible development platform for building customizations, integrations, and extensions within the CRM environment.
- Developed PowerShell scripts and Azure functions in co-ordination with Flow to automate provisioning process.

Vanguard, Charlotte, NC. June 2019 – Oct 2022
Role: PowerApps / Dynamics 365 Developer

- Responsible for overseeing the company's requirements, development, testing and deployment of Microsoft CRM projects.
- Customized Sale module and entities of leads, account, contact and opportunities according to the business process.
- Created SSRS of orders, costs, prices and revenues.
- Used ASP.NET Core 2.1 validation controls for input validation and SSIS 2019 for data loading operations.
- Import and export data within MS Excel and MS Dynamics CRM.
- Created workflows based on requirements from sales department.
- Used MS Dynamics CRM 2011 Customization tools to customize system components such as forms, views, attributes, relationships, and entity mappings.
- Customized and configured Dynamics 365 F&O to align with the organization's specific needs, including creating custom entities, forms, workflows, and business process flows.
- Implemented caching, sessions, view state management in ASP.NET Core 2.1 web apps.
- Integrated Dynamics 365 F&O with other systems, such as CRM, SharePoint, and third-party applications, streamlining data exchange and improving data consistency.
- Managed the data migration process, ensuring the accurate transfer of legacy data into Dynamics 365 F&O, minimizing disruption to operations.
- Design and developed web application interface using web forms, ASP.NET Server controls.
- Collaborated with business stakeholders to map and optimize existing processes, leveraging Dynamics 365 F&O to streamline and automate workflows.
- Designed plug-ins to populate contact and account number on create of new record.
- Customized sitemap for entity navigation for custom menus.
- Responsible for solution management in enterprise environment.
- Responsible for converting business requirements into technical requirements for development team.
- Implemented Power Automate's integration with Dynamics 365 to provides a robust platform for automating business processes, enhancing efficiency, and driving productivity across various departments.
- Enabled integration with various services and applications as Power Automate provides connectors for Dynamics 365, Office 365, SharePoint Online, SQL Server, and many more.
- Demonstrated expertise in Microsoft Dynamics 365 Project Operations, including project planning, resource management, time and expense tracking, and project accounting.
- Module Implementation
- Successfully led the implementation of Dynamics 365 Project Operations, overseeing project setup, configuration, and customization to meet the organization's project management needs.
- Utilized Dynamics 365 Project Operations to create, plan, and schedule projects, ensuring alignment with project timelines and goals.
- Managed project resources efficiently by using Dynamics 365 Project Operations to assign tasks, allocate resources, and monitor resource utilization.
- Used ADO.NET data objects such as Dataset, Data Adapter, Data Table and Data Reader for consistent access to SQL data sources.
- Used Microsoft Dynamics 365 Field Service Management to help businesses manage resources, schedule appointments, track inventory, and provide exceptional customer service. With features like predictive maintenance and IoT integration, it enables organizations to improve efficiency, reduce costs, and enhance customer satisfaction.
- Migrated data from salesforce to dynamics CRM and customised the PSA module
- Designed powerapps [Canvas apps] unifies interface

- Design and customize Dynamics 365 entities, forms, views, and workflows to align with business processes.
- Develop custom plugins using C# to automate business logic, validation, and data manipulation within Dynamics 365. Implement plugins to trigger actions based on specific events, enhancing system functionality.
- Led the Finance workstream to configure and implement Dynamics 365 (D365) with a primary focus on General Ledger, Accounts Payable, Accounts Receivable, Budgeting and Fixed Assets
- Conducted data gathering sessions to obtain, formalize and document business requirements in TFS during the analysis phase of the project
- Performed gap analysis and developed solution design
- Leveraged the Microsoft platform within Dynamics 365,to build powerful, integrated, and intelligent solutions that drive digital transformation, improve business agility, and deliver exceptional value to customers and stakeholders.
- In Dynamics 365 Business Central used the AL Language (Application Language) to develop extensions and customizations.
- Implemented time and expense tracking processes, streamlining data capture and improving the accuracy of project cost tracking.
- Collaborated with Vanguard's business analysts, project managers, and stakeholders to gather requirements and deliver tailored solutions that enhance operational efficiency and client experience.
- Assisted in the upgrade and transition from Dynamics AX to Dynamics 365 Finance and Operations, ensuring minimal disruption to business operations.
- Managed data migration projects, ensuring the seamless integration of legacy systems into Dynamics AX.
- Utilized Dynamics 365 Project Operations to manage project budgets, monitor financial performance, and ensure accurate project accounting.
- Integrated Dynamics 365 Project Operations with other systems and managed data migration to ensure smooth data transfer and maintain data consistency.
- Prepared detailed model specific Business Requirement Documents (BRDs) and Functional Requirement Documents (FDDs) for the client requested system enhancements
- Updated Visio diagrams to reflect the current customer business processes.
- Configured and tested client system in order to confirm compliance with business requirements, design and scope
- Create custom actions to encapsulate complex business logic and expose them as re-usable processes within Dynamics 365, promoting code efficiency and maintainability.
- Managed data migration from legacy ERP system for Accounts Payable, Accounts Receivable, Bank and Cash Management, Fixed Assets and General Ledger.
- leveraged communication and interpersonal skills within CRM D365, organizations to foster positive relationships with customers, enhance team collaboration, and drive business success.
- Developed web pages within the Dynamics 365 Customer Engagement (CRM D365) to extend the platform's functionality and customize the user experience to meet organization's specific needs.
- Used Database design and development principles for designing and customizing CRM D365 entities effectively, ensuring data integrity, and optimizing performance and scalability.
- Involved in writing test plans and coordinated Unit Testing, Integration Testing, Regression Testing and User Acceptance testing and led the testing team
- Configure business process flows to guide users through predefined steps, ensuring consistent and streamlined execution of business processes within Dynamics 365.
- Conducted sessions for all implemented modules
- Utilize JavaScript, jQuery, and web resources to enhance user experience in Dynamics 365 forms and provide interactive and user-friendly interfaces. Develop fancy HTML pages for custom portal solutions

or embedded web resources.

- Design and develop SQL Server Reporting Services (SSRS) reports to provide insightful and actionable business intelligence from Dynamics 365 data.
- Develop Azure Web Jobs to automate background tasks and scheduled processes, enhancing application performance and efficiency.
- Maintained code quality for developing robust and maintainable solutions in Dynamics 365 Customer Engagement.
- Implement data integration and exchange between Dynamics 365 and other systems using APIs, web services, or middleware platforms.
- Plan and execute data migration strategies to import data from legacy systems into Dynamics 365. Create detailed data mapping specifications to ensure accurate data transfer.
- Implement robust error handling and logging mechanisms within plugins, custom actions, and web jobs to capture and address errors effectively.
- Conduct unit testing and participate in system testing to ensure developed solutions meet the specified requirements and perform optimally.
- Implement data security measures to control user access and permissions based on organizational roles. Ensure compliance with data privacy regulations within Dynamics 365.
- Create comprehensive technical documentation, including design documents, deployment guides, and user manuals, to facilitate knowledge sharing. Provide technical support and troubleshooting assistance to end-users and team members.
- Work collaboratively with cross-functional teams, including business analysts, testers, project managers, and other developers, to deliver successful projects and achieve organizational goals.

L&T Infotech, Chennai, India. Jan 2018– March 2019
Role: CRM Developer

Responsibilities:

- Created Custom Entities, Custom Attributes Based on their Requirements.
- Worked on setting up relationship between System & amp; Custom entities.
- Implementation of custom MS Dynamics CRM 365 plug-ins and workflows.
- Customize and Configure CRM Environment and Assist in Deployment Activities.
- Form Customizations Using JavaScript in MS Dynamics 365.
- Responsible for preparing Functional Specification Documentation.
- Build code in for Azure DevOps / release for Azure components.
- Gathered business requirement, designed and developed business applications using Power
- Automate, Power Apps, Flow, PowerBI, and integrated the same with Dynamics 365.
- Using Azure Repos for source Code and Branch development.
- Integrated Dynamics 365 F&O with other systems, such as CRM, SharePoint, and third-party applications, streamlining data exchange and improving data consistency.
- Design in Web-Development technologies like HTML, XML, Web Services (REST and SOAP) .NET and Java script.
- Utilized Dynamics 365 Project Operations to manage project budgets, monitor financial performance, and ensure accurate project accounting.
- Integrated Dynamics 365 Project Operations with other systems and managed data migration to ensure smooth data transfer and maintain data consistency.
- Work experience on Microsoft Flows, Azure Logic Apps. Work with limited direction, usually within a complex environment, to drive delivery of solutions and meet service levels.

- Wrote, debugged and deployed plug-ins using Visual Studio and C# to coordinate the student and program entities.
- Used MS Dynamics CRM SDK, WCF, XRM to interact with data from the CRM system
- Developed Main view and Single view Dashboards as an extension of Dynamics CRM 365.

Quotient Four Technologies, Bangalore, India. May 2012 – Dec 2017
Role: CRM Developer.

- Involved in Requirement Analysis, gathering, Low Level Design, Coding, and Integration.
- Worked on the support team and resolving the tickets received from the client.
- Involved in Agile Sprint planning meeting Performed CRM system administrating including Configure system wide settings, setting entity and global auditing, setting duplicate record detection roles and schedule detection jobs
- Developed workflows for out-of-box and custom entity in CRM 2015 based on user needs.
- System test planning and Unit testing using the Microsoft Unit testing.
- Cleaning data using bulk deletion, exporting data, setup data import asynchronous job
- Responsible for designing and developing the Application using ASP.Net MVC, Razor Syntaxes, Razor view engine.
- Used Pre and Post Images during Plugin Execution Phases for various complex Plugins.
- Involved in various meeting held based on upgrade of the current CRM 2011 version to the CRM 2015 version.
- Conducted overviews regarding business processes with regards to Finance Module
- Built SSRS reports from various heterogeneous sources like SQL Server, Oracle.
- Created SSIS packages for different data loading operations for many applications.
- Tested the code developed to ensure it accurately captured the existing business processes.
- Provided ongoing troubleshooting, defect and enhancements.
- Designed and built DTS/SSIS packages and ran several scripts for implementing changes in the backend for applications.
- Allows banner content and images to be changeable dynamically.
- Hands-on experiences in developing Web/Windows applications using C#, ASP.net, ADO.net, SQL Server and .Net Framework 3.5/4.0 with strong knowledge of Object-Oriented concepts.
- Upgraded ASP.Net web pages and Plugins assemblies.
- Perform CRM Performance Optimization, Error and Trace Diagnostic, DB Backup, Configuration, Bulk delete, and installation of CRM upgrade and patches
- Extensively worked on designing reports using SQL Server Reporting Services (SSRS)

Adaptive Solutions, Hyd, India. May 2009 – May 2012
Role: .Net Developer.

- Installed and configured MS Dynamics CRM 2011 system for development and testing, configured server instance, created organizations.
- Designing Solution, Customization & Configuration, Plug in development, Development of integration web pages in .Net, Operations Support.
- Collected existing infrastructure information including Active Directory, SQL server, Reporting Server instance for implementation of MS Dynamics CRM 2011 system.
- Created custom asp.net pages and configured forms and views for new modules to be added to MS Dynamics CRM system.
- Created and scheduled SSIS packages to pull data from SQL Server and exported to Excel Spreadsheets

and vice versa.

- Used Scribe adapter to import data from CRM 4.0 to CRM 2011 to load data into entities. Extensively used User interface controls that use jQuery to validate client-side validation.
- Used Bing Maps API to design and develop dashboards to display incoming customer requests and update address coordinates in the Microsoft Dynamics CRM 4.0.
- Provided technical guidance to the team and participated in several sessions of code review.
- Assisted the team in basic testing and deployment of the solution.
