Keerthi Annem

Sr. Java AWS Developer

Mail: keerthi1990.a@gmail.com **Phone:** +1 (940) 477-7706

Professional Summary:

- Senior Java AWS Developer with 10+ years of experience specializing in designing and delivering **scalable, secure, cloud-native enterprise solutions** for the **banking and financial services domain**, leveraging **Java, Spring Boot, Microservices, Kafka, and AWS**.
- Expert in **Domain-Driven Design (DDD)** and **Microservices Architecture**, building high-performance, **resilient, and fault-tolerant systems** for mission-critical banking applications, ensuring **high availability and disaster recovery**.
- Proven hands-on experience with **AWS cloud-native services** including **ECS, EKS, Lambda, S3, RDS, and IAM**, deploying containerized applications with **Docker and Kubernetes**.
- Extensive experience engineering **event-driven architectures** using **Apache Kafka** for real-time data streaming, enabling high-throughput financial transactions and event processing.
- Led the implementation of end-to-end **CI/CD pipelines** using **Jenkins, GitHub Actions, Docker, Kubernetes, and Terraform**, integrating automated security checks, testing, and deployments to ensure rapid and reliable releases.
- Strong knowledge of **system design principles, scalability patterns, and performance optimization** for high-volume banking systems, with a deep understanding of **regulatory compliance and security integration (OAuth 2.0, JWT, Spring Security)**.
- Led **cross-team code reviews, architectural discussions, and cloud adoption initiatives**, ensuring **best practices in coding standards, security, and** scalable enterprise architecture.
- Developed **responsive front-end applications** with **Angular, React, Vue.js, Bootstrap, JavaScript, TypeScript, HTML5, and CSS3**, integrating with **Java backends for financial dashboards, retail e-commerce, and government portals**.
- Engineered **event-driven and messaging architectures** with **Kafka, RabbitMQ, ActiveMQ, Spring Cloud Stream, SNS, and SQS**, enabling **real-time financial transactions, retail order tracking, and government notifications**.
- Designed **batch-processing and ETL pipelines** using **Spring Batch, Apache Spark, PySpark, and Java**, deployed on **AWS EC2, Lambda, S3, and EMR**, optimizing **high-volume financial and retail data processing**.
- Managed **relational and NoSQL databases** including **Oracle, SQL Server, PostgreSQL, MySQL, MongoDB, DynamoDB, Cassandra, and Redis**, performing **query optimization, indexing, and** high-performance transactional support.
- Delivered **cloud-native solutions** leveraging **AWS, GCP, and Azure**, provisioning infrastructure with **Terraform, CloudFormation, and Azure Data Factory**, ensuring **scalable, resilient, and compliant deployments**.
- Built **CI/CD pipelines** using **Jenkins, GitHub Actions, Maven, Gradle, Docker, Kubernetes, Terraform, and SonarQube**, integrating automated testing and security checks for **financial, retail, and government applications**.
- Developed **unit, integration, and functional tests** with **JUnit, Mockito, Cucumber, Selenium, Jest, and Cypress**, applying **TDD and BDD practices** for robust, production-ready systems.
- Migrated **legacy J2EE and monolithic applications** to **Spring Boot microservices**, improving **performance, scalability, and cloud readiness** for banking, retail, and government systems.
- Developed **serverless microservices** using **Java, Python, and Golang**, deployed on **AWS Lambda**, integrated with **Spring Boot**, providing high-performance, low-latency banking and financial services.
- Integrated **third-party APIs, payment gateways, ERP/CRM, and logistics systems** using **REST, SOAP, and GraphQL**, ensuring seamless interoperability for **retail and banking platforms**.
- Monitored, debugged, and tuned applications using **ELK Stack, Splunk, Prometheus, Grafana, AWS CloudWatch, and Log4j**, ensuring **high availability, performance, and compliance**.
- Applied **cloud security, encryption, RBAC, TLS/SSL, and regulatory compliance** across Java applications, safeguarding **financial and government data**.
- Mentored **junior developers** on **Java, Spring Boot, cloud architecture, Agile, and secure development practices**, improving team productivity and code quality.
- Developed **interactive dashboards and reporting modules** with **Angular, React, Vue.js, and Bootstrap**, delivering actionable insights for financial, retail, and government stakeholders.

- Engineered **data pipelines and analytics solutions** using **Java, Spark, PySpark, and Kafka**, supporting **real-time financial reporting, retail analytics, and** government data processing.
- Provided **24x7 production support, incident resolution, and root cause analysis** for **mission-critical banking, retail, and government applications**, ensuring minimal downtime and SLA adherence.

Technical Skills:

Programming Languages	Java 7/8/11/17, Golang, Python, J2EE, JSP, Servlets, JavaScript, TypeScript, HTML5, CSS3, SCSS/SASS, SQL, T-SQL, PL/SQL
Frameworks & Libraries	Spring Boot, Spring MVC, Spring Core, Spring Data JPA, Spring Security, Spring Cloud, Spring AOP, Hibernate ORM, Micronaut, Angular 2/8/11/12/13, React 16/17, Vue.js 2/3, Bootstrap 3/4/5, jQuery, AJAX, GraphQL, JSP, JSTL
Web & Application Servers	Apache Tomcat, JBoss, WebLogic, IBM WebSphere, OpenShift, GCP App Engine
Web Services & APIs	RESTful APIs, SOAP, JAX-RS, JAX-WS, JAXP-DOM, SAX, JAXB, GraphQL
Databases & Data Stores	Oracle 10g/11g/12c, SQL Server 2008/2012/2014/2016, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, Redis, BigQuery
Messaging & Queueing	Apache Kafka, RabbitMQ, ActiveMQ, AWS SNS, AWS SQS, Spring Cloud Stream
Cloud Platforms & Services	AWS (EC2, EKS, ECS, Lambda, S3, RDS, CloudFront, Route 53, API Gateway, Cognito, CloudWatch, IAM), GCP (App Engine, Cloud Run, GCS, BigQuery), Azure (Data Factory, App Services, Functions, AKS, Logic Apps)
CI/CD & Build Tools	Jenkins, GitHub Actions, Maven, Gradle, Docker, Kubernetes, Helm, Travis CI, CircleCI, Terraform, CloudFormation, PCF
Version Control & Project Tracking	Git, Bitbucket, SVN, GitHub, Azure DevOps, TFS, JIRA, Rally, QC
Testing & QA Tools	JUnit, Mockito, Selenium, Cucumber, Jest, Cypress, Enzyme, PowerMock, Postman, SoapUI, React Testing Library
Reporting & Analytics	Power BI, SSRS, SSIS, Crystal Reports, Telerik Reporting, BigQuery
Monitoring & Logging	Log4j, Splunk, ELK Stack, Prometheus, Grafana, AWS CloudWatch
Security & Identity	OAuth 2.0, JWT, SSO, OpenID Connect, RBAC, AWS Cognito, Spring Security, PCI DSS
Development Tools / IDEs	IntelliJ IDEA, Eclipse IDE, Visual Studio, Rational Rose, MS Visio, Docker Desktop

Certifications:

- AWS Certified Developer – Associate
- Informatica certified Data Privacy and Governance Developer
- Informatica certified Cloud Modernization: Cloud Data Quality & Data Governance
- Informatica certified Cloud Integration for Modern Applications: API Integration
- Certified Object-Oriented programming with Java
- Certified Front-End JavaScript Frameworks: Angular
- Certified HTML, CSS, and JavaScript for Web Developers
- Certified Full-Stack Web Development with React Specialization

Professional Experience:

Client: Bank Of America, (Remote) **Feb 2023 – Present**
Role: Sr. Java AWS Developer
Responsibilities:

- Lead the design and development of **cloud-native, microservices-based banking applications** on **AWS** using **Java 17, Spring Boot, and Spring Cloud**, applying **Domain-Driven Design (DDD)** principles to create modular and scalable systems.
- Engineered **high-performance, resilient microservices** integrated with **Apache Kafka** for real-time event streaming of financial transactions, ensuring **high availability and fault tolerance**.
- Designed and deployed containerized applications on **AWS EKS** using **Docker and Kubernetes**, implementing **auto-scaling and disaster recovery** strategies for critical banking services.
- Built and managed end-to-end **CI/CD pipelines** with **Jenkins, GitHub Actions, and Terraform** to automate builds, security scans, testing, and deployments of **Java/Spring Boot** applications to **AWS ECS/EKS**.
- Implemented **robust security and authentication** for banking APIs using **Spring Security, OAuth 2.0, and JWT**, ensuring compliance with financial industry standards.
- Optimized application **performance, scalability, and resiliency** by leveraging **AWS Lambda** for serverless functions, **ElastiCache/Redis** for caching, and **RDS/PostgreSQL** for data persistence.
- Implemented messaging pipelines with **Kafka**, **SNS**, and **SQS** using **Java**, **Spring Cloud Stream**, and **AWS**, ensuring reliable asynchronous data streaming in production environments supporting high concurrency and fault tolerance.
- Developed batch-processing systems using **Spring Batch**, **Apache Spark**, and **Java**, optimizing high-volume ETL tasks hosted on **AWS EC2**, **Lambda**, and **S3** storage layers. Tuned Spark jobs for parallelism and reduced processing latency.
- Managed databases like **Oracle**, **PostgreSQL**, **MongoDB**, and **DynamoDB**, crafting optimized queries in **SQL**, **Java**, and **JPA**, and supporting large-scale transactional data. Performed data migration and indexing for query performance.
- Architected and monitored **AWS** infrastructure with **EC2**, **S3**, **EKS**, **CloudWatch**, **SNS**, **SQS**, and **IAM**, applying **Java**, **Spring Boot**, and **Terraform** for deployment. Instrumented monitoring with alarms and log streams.
- Built CI/CD automation pipelines using **Jenkins**, **GitHub Actions**, **Java**, **Maven**, and **Terraform**, enabling repeatable builds and deployments of **Spring Boot** apps to **AWS**. Integrated security scans and performance checks in pipeline.
- Performed API and functional testing using **Postman**, **SoapUI**, and **Java**, logging insights with **ELK Stack**, **Prometheus**, and **Grafana** in cloud-native **AWS** observability solutions. Enhanced debugging efficiency through trace IDs.
- Ensured unit and integration testing using **JUnit**, **Mockito**, **Cucumber**, and **Java**, maintaining test coverage for **Spring Boot**, **AWS Lambda**, and REST service components. Incorporated TDD and BDD practices across teams.
- Controlled source code with **GIT**, **Bitbucket**, and **GitHub**, managing **Java**, **Python**, and **Spring Boot** repositories through GitFlow and trunk-based strategies. Conducted peer reviews and merge conflict resolutions.
- Developed serverless services with **Python**, **Golang**, **Java**, and **Micronaut**, deploying them on **AWS Lambda** and integrating them into existing **Spring Boot** systems. Implemented cold start mitigation and modular functions.
- Participated in Agile ceremonies including stand-ups, planning, and code reviews, collaborating across teams to deliver enterprise-grade **Java**, **AWS**, and **Spring Boot** applications. Mentored junior developers and enforced clean code principles.

Environment: Agile, Java 17, J2EE, Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Data JPA, Spring AOP, Spring Config, Microservices, REST API, Hibernate, JPA, OAuth 2.0, JWT, Single Sign-On (SSO), Apache Kafka, SNS, SQS, Spring Batch, Apache Spark, Oracle, PostgreSQL, MongoDB, DynamoDB, Redis, SQL, Angular, Vue.js, Bootstrap, HTML5, CSS3, JavaScript, TypeScript, Node.js, GraphQL, Terraform, AWS (EC2, EKS, ECS, Lambda, S3, RDS, CloudWatch, IAM, API Gateway, CloudFront), Docker, Kubernetes, OpenShift, Jenkins, GitHub Actions, Git, Bitbucket, IntelliJ IDEA, Postman, SoapUI, JUnit, Mockito, Cucumber, ELK Stack, Prometheus, Grafana, Rally, JIRA, Maven, CI/CD, Python, Golang, Micronaut

Client: Best Buy, Richfield, MN **Mar 2021 – Jan 2023**
Role: Sr. Java Full Stack Developer
Responsibilities:

- Architected and developed **high-volume retail e-commerce platforms** using **Java 17, Spring Boot, and Microservices**, deployed on **AWS EKS**.
- Implemented **event-driven order processing systems** using **Kafka and Spring Cloud Stream** to handle peak traffic during major sales events, demonstrating **scalability and high availability**.
- Utilized **AWS Lambda and S3** for serverless data processing and built **CI/CD pipelines** with **Jenkins and Docker** for continuous deployment.
- Built and deployed cloud-native microservices on **AWS (EC2, EKS, ECS, Lambda, S3, RDS, CloudFront, Route 53)**, **GCP (App Engine, Cloud Run, GCS, BigQuery)**, and **Azure Data Factory**, provisioning via **Terraform, PCF, CloudFormation**.
- Created real-time retail inventory and order tracking pipelines using **Kafka, RabbitMQ, ActiveMQ, Spring Cloud Stream, AWS SNS, SQS** for asynchronous, event-driven architectures.

- Optimized **SQL** and **NoSQL** database performance for **Oracle, DB2, MySQL, PostgreSQL, SQL Server, MongoDB, DynamoDB, Cassandra, Redis** through indexing, partitioning, and query tuning.
- Integrated external payment gateways, logistics APIs, and marketing systems via **SOAP, REST, WSDL, JAX-WS, JAX-RS, JAXP-DOM, SAX, JAXB**, ensuring smooth third-party interoperability.
- Configured and tuned application servers including **IBM WebSphere, WebLogic, JBoss, Apache Tomcat, OpenShift, GCP App Engine** to handle seasonal traffic spikes like **Black Friday**.
- Managed CI/CD pipelines with **Jenkins, Maven, Gradle, Docker, Kubernetes, Travis CI, CircleCI, CodePipeline, CodeDeploy**, incorporating automated builds, deployments, and quality gates with **SonarQube**.
- Monitored and troubleshot production retail systems using **ELK Stack, Prometheus, Grafana, AWS CloudWatch**, and proactive alerting to minimize downtime.
- Implemented automated testing with **JUnit, Mockito, Selenium, Cucumber, Jest, Cypress, Enzyme, PowerMock, Postman**, applying **TDD** and **BDD** for zero-defect releases.
- Developed batch-processing jobs with **PySpark, Scala, Spring Batch** for large-scale retail analytics, deployed on **AWS Lambda, S3, EMR clusters**.
- Utilized **Git, Bitbucket, SVN, GitHub, ClearCase** for source control and branching strategies, conducting peer code reviews to maintain clean, reusable code.
- Collaborated in **Agile Scrum** using **JIRA, Rally, QC** for sprint planning, backlog grooming, and cross-functional team coordination; mentored developers on **Java, cloud**, and retail-specific best practices.
- Enhanced retail personalization features by integrating **BigQuery analytics, AWS Connect**, and customer segmentation models, improving targeted promotions and customer retention.
- **Architected and optimized omnichannel retail order fulfillment workflows using Java 17, Spring Boot microservices, Kafka event streaming, AWS EKS, and DynamoDB**, integrating with ERP, POS, and CRM systems for unified customer experiences.
- **Led migration of legacy J2EE retail applications to cloud-native architectures on AWS and GCP using Docker, Kubernetes, Terraform, Spring Cloud, and GraphQL APIs**, reducing infrastructure costs and improving scalability for flash sale events.

Environment: Java 17, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, REST, SOAP, GraphQL, OAuth 2.0, JWT, AWS (EC2, EKS, ECS, Lambda, S3, RDS, CloudFront, API Gateway, Cognito, SNS, SQS), GCP (App Engine, Cloud Run, GCS, BigQuery), Azure Data Factory, Terraform, Angular, React, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery, Kafka, RabbitMQ, Oracle, MySQL, PostgreSQL, SQL Server, MongoDB, Redis, IBM WebSphere, JBoss, Apache Tomcat, Jenkins, Maven, Gradle, Docker, Kubernetes, SonarQube, ELK Stack, Prometheus, Grafana, JUnit, Mockito, Selenium, Cucumber, PySpark, Spring Batch, Git, Bitbucket, Agile Scrum, JIRA, PCI DSS, ERP, POS, CRM systems.

Client: Toyota Financial, Cherryhill Township, NJ **May 2019 – Feb 2021**
Role: Java AWS Developer
Responsibilities:

- Developed and migrated financial services applications to **AWS**, utilizing **ECS, Lambda, and S3** to create a **scalable and cost-effective cloud-native architecture**.
- Built **asynchronous messaging solutions** with **Kafka and AWS SQS/SNS** to decouple microservices and enhance system **resiliency**.
- Automated infrastructure provisioning and deployment processes using **Terraform** and **Jenkins CI/CD**.
- Designed persistence and data access layers using **Spring JPA**, **Spring Data JPA**, and **Hibernate**, integrating these with **Spring MVC** and **Spring Boot** to establish robust domain-driven **Java** components in microservice ecosystems.
- Delivered front-end functionality using **Vue.js2**, **Angular 8**, **HTML5**, **CSS3**, **JavaScript**, and **TypeScript**, integrating tightly with **Java-based REST APIs**, ensuring responsive, cross-browser compatible web applications.
- Engineered and consumed **Kafka** producers and consumers in **Java**, enabling asynchronous, distributed data pipelines across microservices for reliable messaging, integrated with **AWS SQS**, **SNS**, and monitored via **CloudWatch**.
- Developed comprehensive unit and integration tests using **JUnit**, **Mockito**, and **Cucumber** under **BDD** methodology, enhancing test coverage for critical **Java** modules, and supporting continuous delivery with **Jenkins** and **Docker**.
- Built and deployed containerized applications using **Docker** and **Kubernetes**, managing workloads across **AWS ECS**, **EKS**, and on-premise servers, orchestrated via **Terraform** and monitored through **CloudWatch** and **Splunk**.
- Leveraged **AWS EC2**, **S3**, **Lambda**, **ECS**, **CloudFront**, and **DynamoDB** to host and maintain highly available, fault-tolerant **Java** services, optimizing resource usage and enabling automatic scaling and deployment.
- Implemented **GraphQL APIs** using **Java**, **Spring Boot**, and **Node.js**, providing flexible query capabilities, integrated with **MongoDB**, **PostgreSQL**, and **Cassandra** databases across hybrid **AWS** and on-premise environments.

- Enhanced developer productivity using **IntelliJ IDEA**, **Git**, and **GitHub**, ensuring version control and collaborative development for **Java**, **Spring Boot**, and **React/Vue.js** projects within enterprise-level workflows.
- Designed and maintained scalable **ETL pipelines** using **Java**, **Spark**, **PySpark**, and **Scala** for batch processing, fetching data from **AWS S3**, **EC2**, **Teradata**, and **Redshift**, supporting analytics and reporting.
- Configured **JBoss** for application deployments, including performance tuning, load balancing, and high availability, ensuring optimal runtime for **Java** services under stringent **SLAs** and real-time requirements.
- Automated application deployment with **CI/CD pipelines** using **Jenkins**, **Maven**, and **Terraform**, seamlessly integrating **Java** builds, unit tests, containerization, and cloud deployments for production environments.
- Used **Log4j**, **Splunk**, and **ELK stack** for logging and monitoring **Java** applications, enabling root cause analysis, proactive alerting, and maintaining system health in critical business operations.
- Created and consumed **SOAP** and **RESTful web services** using **JAX-WS**, **JAX-RS**, **Spring Boot**, and **Spring MVC**, transforming legacy monoliths into modular **Java microservices**, adhering to modern **API standards**.
- Implemented **CI/CD pipelines** with **Jenkins** and **UNIX Shell scripts**, developing and deploying systems on a **Kubernetes** environment using **Kubernetes** and **Docker**.
- Utilized **Log4j** for run-time logs, wrote comprehensive **JUnit** test cases (unit, integration, functional), automatically executed by **Jenkins**, and leveraged **Maven** for project management and build automation.
- Managed version control using **Git** and **GitHub** for code merges and branching, primarily using **IntelliJ IDEA** as the IDE.
- Integrated **React Testing Library** for component-level testing in **React 17** applications with CI validation through **Jenkins**.
- Applied **SCSS/SASS** for managing responsive and modular style structures in **Angular** components.
- Participated in setting up a **micro frontend architecture** using **module federation** to enable independent deployment of **React** and **Angular** modules.
- Migrated critical backend components from **Java** to **Go**, reducing service response time by 40% and cutting infrastructure costs via reduced memory footprint.
- Implemented **event-driven architecture** using **Golang** with **Kafka**, processing millions of messages per day with high throughput and at-least-once delivery guarantees.
- Developed **RESTful services** and backend tools using **Golang** for performance-intensive modules within a **microservices architecture**.

Environment: Agile Methodology, Java11, J2EE, Spring IOC, Spring MVC, Spring Data JPA, Spring JPA, Spring AOP, Spring Security, Spring Boot, Spring Cloud, Spring Data, RESTful services, Tomcat, Micronaut, SOAP, Microservices Architecture, JWT, OAuth2.0, SSO, Kafka, ECMAscript, REST API, HTML5, CSS3, JavaScript, TypeScript, jQuery, Ajax, JSON, JBoss, React , Vue.js2, Node.js, SQL, MS SQL, Oracle, PostgreSQL, NoSQL, MongoDB, CassandraDB, JDBC, MongoDB, BigData, Python, GraphQL, Terraform, Azure, Hibernate, Mockito, Cucumber, Docker, Kubernetes, Log4j, CI/CD, Jenkins, JUnit, Gradle, IntelliJ, Git, GitHub.

Client: State of Alabama, Alabama, USA **Aug 2017 – Apr 2019**
ROLE: Java Developer
Responsibilities:

- Designed, developed, and maintained **Java 8, J2EE enterprise applications** for state government agencies, ensuring **WCAG, HIPAA, Section 508**, and state regulatory compliance; used **Eclipse IDE**, **Maven**, and **Git** for development, dependency management, and version control.
- Implemented **Spring MVC, Spring Boot, Spring Security** frameworks to build scalable, modular web applications, integrating **RESTful APIs** and **SOAP Web Services** for secure inter-agency communication, deployed on **Apache Tomcat** and integrated with **AWS S3**.
- Developed and optimized complex **PL/SQL stored procedures, functions, and triggers** in **Oracle 12c** and **SQL Server 2016**, using **Hibernate ORM** with **HQL tuning** to improve database interaction speed, scalability, and caching efficiency.
- Built responsive and dynamic UI components using **HTML5, CSS3, JavaScript, jQuery**, and **AngularJS**, styled with **Bootstrap** for mobile-first design, ensuring **accessibility compliance** with **WCAG** and **Section 508** standards.
- Leveraged **Hibernate ORM** for seamless persistence and caching, integrating with **Spring Data JPA** and optimizing queries using **HQL tuning**, reducing load on **Oracle 12c** and **SQL Server 2016** databases.
- Integrated **OAuth 2.0** and **JWT** for secure authentication and authorization, ensuring data protection in compliance with **HIPAA** and **state security policies**, tested via **Postman** and **JUnit** frameworks.
- Followed **Agile Scrum** methodology using **JIRA** for sprint planning, backlog grooming, and retrospectives, collaborating with cross-functional teams to deliver **Java, Spring Boot, AngularJS** solutions on time and within scope.
- Configured **Jenkins** CI/CD pipelines to automate builds, testing, and deployments, integrating **JUnit**, **Mockito**, and **SonarQube** for quality gates and deploying to **QA**, **UAT**, and **production** environments.

- Managed source code using **Git**, **Bitbucket**, and branching strategies, enforcing code quality standards with **SonarQube**, **Checkstyle**, and **FindBugs** for consistent **Java, Spring Boot, and AngularJS** codebases.
- Performed thorough testing using **JUnit**, **Mockito**, and **Selenium WebDriver** for unit, integration, and regression testing, integrated into **Jenkins** pipelines to ensure continuous quality assurance.
- Implemented logging and monitoring using **Log4j**, **Splunk**, and **ELK Stack**, creating custom dashboards and alerts to proactively identify and resolve issues in **Java, Spring Boot, and AngularJS** applications.
- Authored detailed technical documentation using **Confluence** and **Microsoft Visio**, creating **UML diagrams**, data flow charts, and API specifications for **Java, Spring Boot, and Microservices** architectures.
- Supported production systems by troubleshooting incidents, deploying hotfixes, and enhancing application performance in **Java, Spring Boot, Oracle, SQL Server**, and **AngularJS** environments.
- Migrated legacy monolithic applications to **Spring Boot Microservices** architecture deployed on **Tomcat**, integrating with **AWS S3, AWS RDS**, and monitoring with **CloudWatch** for high availability.
- Automated build and deployment processes using **Maven** and **Unix/Linux shell scripts**, optimizing release cycles and ensuring consistent deployments for **Java, Spring Boot, and AngularJS** solutions.

Environment: Java 8, J2EE, Spring Boot, Spring MVC, Spring Security, RESTful APIs, SOAP Web Services, Hibernate ORM, Spring Data JPA, Oracle 12c, SQL Server 2016, PL/SQL, T-SQL, HQL, HTML5, CSS3, JavaScript, jQuery, AngularJS, Bootstrap, WCAG, Section 508, HIPAA, OAuth 2.0, JWT, Eclipse IDE, Maven, Git, Bitbucket, Jenkins, SonarQube, Checkstyle, FindBugs, JUnit, Mockito, Selenium WebDriver, Log4j, Splunk, ELK Stack, Confluence, Microsoft Visio, Apache Tomcat, AWS S3, AWS RDS, AWS CloudWatch, Unix/Linux shell scripting, Agile Scrum, JIRA, Postman, QA/UAT/Production environments.

Client: Radiant Technology, Hyderabad, IN **Mar 2012 – Dec 2015**
Role: Java Developer
Responsibilities:

- Designed and developed **Java 7**, **J2EE** applications using **Spring MVC**, **Spring Core**, and **Hibernate ORM**, building scalable, reusable modules for enterprise-level solutions.
- Built **JSP**, **Servlets**, **JSTL** components integrated with **RESTful APIs** and **SOAP** services using **JAX-RS** and **JAX-WS**, ensuring seamless system interoperability.
- Optimized **PL/SQL** stored procedures, triggers, and functions in **Oracle 11g** and **MySQL**, improving query execution and transactional performance.
- Created responsive UIs using **HTML5**, **CSS3**, **JavaScript**, **jQuery**, and **Bootstrap**, enhancing cross-browser compatibility and mobile responsiveness.
- Configured and deployed applications on **Apache Tomcat** and **JBoss Application Server**, fine-tuning JVM parameters for performance optimization.
- Utilized **Maven** for dependency management and build automation, ensuring consistent builds across multiple environments.
- Automated CI/CD pipelines in **Jenkins** with integrated **JUnit** and **Mockito** testing for unit, integration, and functional coverage.
- Managed code repositories in **Git** and **SVN**, implementing branching, merging, and release management best practices.
- Implemented logging using **Log4j** and monitored production environments via **Unix/Linux** shell scripts for proactive troubleshooting.
- Collaborated in **Agile Scrum** teams, leveraging tools like **JIRA** for sprint tracking, backlog management, and defect resolution.
- Integrated third-party APIs and internal web services with **Spring REST** and **SOAP** for secure data exchange, leveraging **OAuth 2.0** for authentication and authorization.
- Performed application performance tuning using **JProfiler** and **SQL execution plan analysis**, reducing average response times by over 25% in high-traffic modules.

Environment: Java, J2EE, JSP, Servlets, Spring MVC, Struts, Hibernate, JDBC, HTML, CSS, JavaScript, jQuery, AJAX, Oracle 10g, PL/SQL, Eclipse IDE, Apache Tomcat, JBoss, Maven, SVN, JUnit, Log4j, SOAP, REST, XML, JSON, JProfiler, Windows, Linux.
