Name: Koushik
Senior Java AWS Developer
Phone: 571-464-0133
Email Id: khoushikraj37@gmail.com
LinkedIn: https://www.linkedin.com/in/r-khoushik-raj-a69608266/

Profile Summary

- Seasoned **Senior Java AWS Developer** with **12+ years** of **experience** in **Java, Spring Boot, RESTful APIs, and Microservices**, building scalable solutions on **AWS (Lambda, S3, DynamoDB, API Gateway, EKS, EC2, CloudWatch)**. Skilled in **Angular/React, TypeScript, Docker, Kubernetes, Kafka, Jenkins, GitHub Actions, and CI/CD pipelines**, delivering secure, cloud-native applications in Agile environments.
- Extensive exposure to **Java 22, Core Java, J2EE, Spring Framework, Spring Boot**, delivering enterprise-grade applications with robust backend design.
- Hands-on delivery of secure integrations with **RESTful APIs, SOAP, Spring HATEOAS, DTOs, JSON**, ensuring scalable inter-application communication.
- Proficient in applying **Drools Rule Engine, DRL files, Decision Tables, KIE modules, DMN**, automating business rules for compliance-heavy domains.
- Experienced in building modern SPAs with **Angular v14, Angular v10, TypeScript, JavaScript, HTML5, CSS3, Bootstrap (v3)** for WCAG-compliant frontends.
- Adept at developing reusable UI components with **React 16, jQuery, Ajax**, and integrating dashboards using **Node.js v18, Golang**.
- Skilled in orchestrating workflows with **jBPM, Spring Cloud, GraphQL**, powering microservices across enterprise applications.
- Capable of optimizing database performance on **Oracle, MySQL, PostgreSQL, Amazon RDS, Amazon Aurora, Cassandra, MS SQL Server**, with **JDBC, RowMapper**.
- Versatile in building event-driven cloud-native solutions using **AWS Lambda, AWS S3, AWS DynamoDB, AWS SNS, AWS SQS, AWS API Gateway**.
- Well-versed in containerization and orchestration with **Docker, Amazon EKS (Kubernetes), AWS EC2, AWS Elastic Beanstalk** for fault-tolerant deployments.
- Enable high-throughput messaging using **Apache Kafka, Amazon MSK, JMS, ActiveMQ**, ensuring reliable event streaming.
- Mentor teams in adopting CI/CD practices with **Jenkins, Maven, Gradle, AWS CodePipeline, AWS CodeBuild, Git, Bitbucket, AWS CodeCommit, GitHub Actions**.
- Establish robust observability practices with **SLF4J, Logback, Log4j, AWS CloudWatch, AWS X-Ray, AWS CloudTrail, AWS KMS**.
- Automate Agile delivery models with **Scrum, Kanban, Trello, Jira**, ensuring compliance with **Basel III, PCI-DSS, HIPAA**.
- Coordinate quality assurance through test automation frameworks like **JUnit, Jasmine, TestNG, JaCoCo, JEST, Mockito**.
- Knowledgeable in XML data processing with **XSLT, XPath, XML, xsltproc**, and documenting APIs via **Spring REST Docs**.
- Champion secure infrastructure practices with **AWS IAM, AWS VPC, VPN, AWS ELB, OAuth2**, enforcing RBAC and encryption.
- Facilitate Infrastructure-as-Code adoption using **AWS CloudFormation, Terraform, AWS CDK**.
- Harness development and debugging tools such as **NetBeans, Eclipse IDE, WebStorm, Linux/Unix Shell utilities**, with repositories managed in **SVN, GitHub, Bitbucket, Confluence**.
- Enhance application resilience by validating performance with **Apache JMeter, Ant, Bugzilla**, and embedding SonarQube checks into CI/CD.
- Engineer comprehensive technical documentation in **SharePoint, Confluence, Bitbucket Wiki**, supporting onboarding, migrations, and regulatory audits.

Technical Skills

Category	Tools & Technologies
Programming Languages	Java (6–22), Core Java, OOP, Multithreading, Collections, Streams, Functional Programming, JavaScript, TypeScript, Node.js (v18), Golang, Shell Scripting
Frontend Development	Angular (v10–v16), React (v0.12–v18), HTML5, CSS3, Bootstrap, Ajax, jQuery, WCAG (Accessibility Standards)
Backend Development	Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring HATEOAS, Hibernate, Microservices, RESTful APIs, GraphQL, DTOs, JSON, SOAP/XML, JDBC, RowMapper
Databases	SQL (Oracle, PostgreSQL, MS SQL Server), NoSQL (MongoDB, Cassandra)
Messaging & Eventing	RabbitMQ, Kafka, JMS, ActiveMQ
Cloud Platforms	**AWS**: Lambda, API Gateway, EC2, S3, Functions, AAD, VNet, Virtual Machines, WebLogic, WebSphere, Active Directory Cloud Run, Workflows, Functions, GKE, Cloud Build, Cloud Trace, Cloud Monitoring, Google Cloud Workflows, Google Cloud Functions
DevOps & IaC	Docker, Kubernetes, GKE, Terraform, CloudFormation, Jenkins, GitLab CI/CD, GitHub Actions, CI/CD pipelines, SRE, DevOps
Build & Dependency Mgmt	Maven, Gradle, Ant
Version Control & Collaboration	GitHub, GitLab, Bitbucket, SVN, GitFlow, Bitbucket Wiki, GitHub Wiki, SharePoint, Confluence, Trello, Jira, Bugzilla
Testing & QA	JUnit, Mockito, TestNG, Jasmine, JEST, JaCoCo, JMeter, XMLUnit, Schematron, TDD/BDD practices
Monitoring& Logging	SLF4J, Log4j, Logback, DataDog, OpenTelemetry, Cloud Trace, Cloud Monitoring
IDE & Tools	IntelliJ IDEA, Eclipse, NetBeans, WebStorm, xsltproc
Data Exchange & XML Tools	XML, XSLT, XSD, XPath
Compliance & Standards	SOX, HIPAA, PCI-DSS, Basel III, ITGC, HL7, FHIR, SLA/SLIs/SLOs
Agile & Methodologies	Agile (Scrum, Kanban), SDLC, Backlog Refinement, Sprint Planning

Accreditations & Training

- AWS Certified Solutions Architect Associate.

Professional Endeavours

Client: Bank Of America Corp. Charlotte, NC **Aug 2021 – Present**
Senior Java AWS Developer

Responsibilities:

- Architected and delivered scalable **Microservices** using **Java 22, Core Java, J2EE and Spring Framework (Spring Boot)** to power AWS-hosted banking systems including customer onboarding, loan management, fund transfers and compliance reporting with high concurrency and resilience.
- Designed and exposed **RESTful APIs and SOAP services** using **Spring HATEOAS, DTOs and JSON**, supporting secure integrations for KYC verification, credit bureau lookups and real-time data exchange across AWS-based ecosystems.
- Implemented business rules with **Drools Rule Engine (DRL files, Decision Tables, KIE modules)** and **DMN**, orchestrating automated eligibility scoring, sanctions screening and risk calculations integrated with AWS-native data services.

- Developed responsive **SPAs** using **Angular v14, TypeScript, JavaScript, HTML5, CSS3 and Bootstrap**, integrating AWS-backed Microservices and REST APIs to deliver WCAG-compliant account opening dashboards and secure transaction flows.
- Engineered backend utilities with **Node.js v18, Golang and Drools**, streamlining asynchronous workflows for OTP validation, ACH/NACH file processing and approval flows; leveraged **jBPM** in conjunction with AWS Step Functions for orchestrating complex process automation.
- Optimized **SQL query performance** using **JDBC and RowMapper** across **Oracle, MySQL and PostgreSQL** hosted on **Amazon RDS and Aurora**, enabling efficient handling of ledgers, audit trails and high-volume transactional datasets.
- Integrated **AWS services (Lambda, S3, DynamoDB, SNS, SQS, API Gateway, CloudWatch)** with Drools pipelines for fraud detection, AML alerting and reconciliations, while containerizing workloads with **Docker** and deploying them on **Amazon EKS (Kubernetes)** for scalable, zero-downtime rollouts.
- Established secure messaging patterns using **Apache Kafka, Amazon MSK, JMS and AWS SQS**, handling inter-service communication, customer alerts and fraud triggers in high-throughput banking workloads.
- Streamlined **CI/CD pipelines** with **Jenkins, Maven, Gradle, AWS CodePipeline and Git**, automating build/test/deploy cycles for Java microservices and Angular apps with embedded security gates, unit coverage and compliance validation.
- Packaged multi-module applications with **Maven and Gradle**, modularizing domains such as customer eligibility and loan servicing; enforced governance via **Git, Bitbucket and AWS CodeCommit**, supported by peer-reviewed pull requests.
- Enforced structured logging with **SLF4J and Logback**, integrated **Drools audit trails** and tracked PII-sensitive actions, payments and API usage under **AWS CloudWatch Logs** for SOX and ITGC compliance within Agile delivery cycles.
- Partnered with **Site Reliability Engineering (SRE)** to define **SLIs/SLOs** for AWS-hosted microservices, coordinated sprint health in **Scrum** and ensured audit readiness with **Basel III and PCI-DSS** compliance.
- Delivered secure, performant solutions by combining **Spring Framework, Drools, DMN and jBPM**, embedding regulatory controls, encryption and AWS-native monitoring into mission-critical financial services.
- Supported production deployments, troubleshooting rule-related issues across **Drools workflows, JMS queues, AWS Lambda and MSK clusters**, ensuring 24/7 seamless availability of digital banking platforms.
- Authored **technical documentation and wikis in Bitbucket Wiki**, capturing Drools logic, DMN models, jBPM workflows and AWS cloud architectures for institutional knowledge sharing.

Client: CVS Health – Woonsocket, RI **Nov 2019- July 2021**
Sr. Java AWS Developer

Responsibilities:

- Spearheaded development of **Microservices** using **Java 14, Core Java, J2EE and Spring Framework (Spring Boot)**, incorporating **Records, Switch Expressions and Streams** to automate healthcare workflows such as patient admission, lab ordering, prescription updates, appointment scheduling and claims adjudication on **AWS-hosted environments**.
- Designed rich **SPAs** with **Angular v10, TypeScript, HTML5, CSS3 and Bootstrap**, integrating with **RESTful APIs, SOAP and AWS-backed Microservices** to enable patient self-service portals, clinician dashboards and billing reconciliation systems.
- Applied **Drools Rule Engine (DRL files, Decision Tables, KIE modules)** and **DMN** to standardize insurance claim validations, prescription dosage rules and medical eligibility workflows in compliance with **HIPAA**, integrated with **AWS Lambda and RDS**.
- Implemented backend workflows in **Spring Cloud and Microservices**, leveraging **Apache Kafka, JMS and Amazon SQS** to connect EMR systems, pharmacy APIs, laboratory portals and insurance verification services for secure inter-system communication.
- Optimized relational database design and queries in **PostgreSQL, Oracle and MySQL** hosted on **Amazon RDS and Aurora**, managing patient demographics, lab results, prescription histories and claims data with strict healthcare compliance.
- Orchestrated clinical workflows using **jBPM and Drools**, while leveraging **AWS EC2, S3, Lambda, Step Functions and API Gateway** for hybrid deployments handling lab orders, billing adjustments and patient discharge workflows.
- Built scalable **CI/CD pipelines** using **AWS CodePipeline, CodeBuild, Maven, Gradle and Git**, automating unit/integration testing, containerization and deployments for healthcare applications across QA, UAT and production environments.

- Deployed modular backend and Microservices into **Docker containers** orchestrated with **Amazon EKS (Kubernetes)**, ensuring resilience and auto-scaling during high-volume surges such as vaccination rollouts and flu campaigns.
- Applied **Drools with DMN and jBPM** to design claims adjudication and patient eligibility workflows, embedding audit-ready logic into AWS-based Microservices orchestrated on **EKS clusters**.
- Ensured robust quality and coverage with **JUnit, Jasmine, TestNG and JaCoCo**, validating claims, prescriptions and lab orders while embedding **Drools-driven decision logic** in **AWS-hosted APIs**.
- Instrumented observability with **AWS CloudWatch, X-Ray and CloudTrail**, capturing rule execution logs from **Drools** and queue traces from **Kafka, JMS and Amazon SQS** for real-time diagnostics.
- Modularized backend logic with **Maven and Gradle**, managing services for clinical decision support, compliance schedulers and eligibility APIs; enforced **Git and CodeCommit** governance with PR reviews under **Agile Scrum** delivery.
- Debugged and profiled backend components in **NetBeans**, resolving integration issues with **Drools, SOAP APIs, J2EE modules** and ensuring seamless ingestion of **HL7 and FHIR** data streams across **AWS-based services**.
- Authored and versioned **RESTful APIs and SOAP endpoints** using **Spring REST Docs**, documenting secure integrations across EMR, pharmacy and insurance providers with **Drools-driven decision logic and AWS API Gateway**.
- Maintained secure workflows with **SLF4J, Logback and AWS KMS**, enabling traceability for **Drools rule updates, DMN models and HIPAA-compliant audit trails**.
- Tracked features and compliance deliverables in **Jira**, facilitated cross-team coordination under **Agile Scrum** and ensured alignment with **HIPAA mandates, AWS Well-Architected security practices and patient safety protocols**.

Client: The Home Depot – Atlanta, Georgia **Sept 2017 – Oct 2019**
Sr. Java AWS Developer

Responsibilities:

- Delivered end-to-end retail management application modules by leading **Agile sprints and backlog grooming**, accelerating deployment of critical systems including pricing policy configuration, automated discount workflows and customer eligibility validation for loyalty programs hosted on **AWS**.
- Engineered high-throughput backend workflows in **Java 7**, incorporating **custom comparators and data structures** to optimize processing of inventory adjustments, product matching and compliance file parsing across **AWS-deployed microservices**.
- Developed responsive, mobile-optimized front-end components with **JavaScript, HTML5, CSS3, Bootstrap 3** and integrated them with **AWS-backed REST APIs** for portals, order lookups and payment systems.
- Created interactive merchant and store manager dashboards using **React 16**, visualizing sales summaries, order fulfillment and payment history with data delivered via **AWS-hosted APIs**.
- Built asynchronous back-end services using **Spring JMS**, applying **XSLT/XPath transforms** on XML payloads between pricing engines, payment processors and inventory services; deployed through **AWS Lambda** and **Step Functions**.
- Developed secure **RESTful APIs** using **JSON/XML**, exposing order and payment services to vendors; employed **XSLT** and integrated with **AWS API Gateway** for downstream compliance reporting.
- Integrated **Node.js middleware** with **AWS Lambda** to consolidate fragmented datasets from legacy retail portals, harmonizing vendor-specific XML into canonical models and reducing allocation latency.
- Enabled centralized observability with **AWS CloudWatch and X-Ray**, combining logs, metrics and traces across workflows for SLA compliance and capacity planning.
- Implemented scalable document ingestion and validation workflows using **AWS Lambda, S3 and Step Functions**, embedding **XSD schema validation and XSLT enrichment** for order imports, payment validations and audits.
- Deployed containerized microservices with **Docker** onto **Amazon EKS**, ensuring resilience, auto-healing and scale-up during peak cycles (holiday sales, promotions).
- Supported structured/unstructured file processing using **ActiveMQ** integrated with **AWS SQS/SNS**, inserting **XSLT-based validation and enrichment** for notifications, confirmations and compliance events.
- Modeled normalized schemas in **Oracle** hosted on **Amazon RDS**, optimizing queries for real-time customer records, orders and audit logs.
- Automated secure CI/CD pipelines with **AWS CodePipeline, CodeBuild, GitLab CI/CD, Maven and Gradle**, embedding XML quality gates (XMLUnit, Schematron, XSD validation) and enforcing promotion integrity across environments.

- Managed modular microservice builds with **Maven**, packaging **EDI/XML transformation logic** and deploying via **AWS CloudFormation templates** for compliance-aligned product/order models.
- Enhanced stability and performance of **Java applications** using **Eclipse IDE**, profiling memory leaks and reducing downtime across **AWS-deployed order and payment services**.
- Deployed scalable APIs and Java EE modules on **AWS EC2** with **Elastic Load Balancing (ELB)**, configuring thread pools and JDBC connections for concurrent portal access.
- Maintained secure version control with **SVN and Git**, managing release cycles and hotfixes for order integrations, catalogs and compliance modules deployed in **AWS environments**.
- Secured external APIs and internal apps with **AWS IAM, OAuth2 and RBAC policies**, controlling access for store managers, merchandisers and compliance officers.
- Utilized **Hibernate** for mapping complex domain models (customers, orders, payments), ensuring XML-derived data consistency with persistence rules, integrated with **AWS-hosted databases**.
- Tracked sprints, releases and seasonal priorities using **Trello**, coordinating timely delivery of price updates, sales reporting and returns tracking under **Agile Scrum**.
- Wrote unit/integration tests for **Angular forms** using **JEST**, validating logic for orders, payments and returns with integrations against **AWS-backed services**.
- Debugged backend and integration services in **Linux/Unix**, using **Shell utilities (xsltproc)** for XML transforms, log analysis and troubleshooting across **AWS-hosted pipelines**.
- Centralized structured logging using **Log4j** and **AWS CloudWatch Logs**, capturing transactions, inventory verifications and compliance events for audits.
- Authored comprehensive API documentation, onboarding guides and integration specs in **SharePoint**, detailing **AWS API Gateway endpoints**, vendor integrations and internal readiness for retail systems.

Client: State of Indiana, IN **Jan 2015 -Aug 2017**
Java AWS Developer

Responsibilities:

- Led enhancements to **policy processing workflows** and regulatory reporting automation using **Kanban**, optimizing backlog priorities and ensuring smooth coordination across insurance operations and compliance teams deployed on **AWS**.
- Developed batch automation modules in **Java 6**, supporting recurring processes such as premium recalculations, policy renewal triggers and portfolio update notifications across insurance products hosted on **AWS EC2**.
- Created responsive **web interfaces** with **JavaScript, HTML5, CSS3, Bootstrap 3**, improving usability for agents and underwriters accessing claim dashboards, risk reports and policy profiles.
- Built modular **frontend components** in **React v0.12**, utilizing **Virtual DOM, Props and State** to enable dynamic updates for policy summaries, claim history and fraud risk alerts integrated with **AWS APIs**.
- Engineered secure **backend services** using **Spring MVC**, managing policyholder sessions, audit logs and transaction tracking for payouts, disbursements and adjustments, deployed on **AWS Elastic Beanstalk**.
- Designed flexible query endpoints with **GraphQL**, retrieving real-time balances, claim status, coverage limits and compliance metrics from **AWS-hosted services**.
- Deployed region-specific insurance portals on **AWS EC2** with **Elastic Load Balancing (ELB)**, providing localized access to branch performance reports, engagement analytics and KYC/AML monitoring.
- Built and maintained automated **CI/CD pipelines** using **Jenkins, AWS CodePipeline and CodeBuild**, streamlining releases of premium models, compliance rules and risk scoring engines.
- Provisioned isolated cloud-based test environments with **Terraform and AWS CloudFormation**, validating calculation templates, policy configs and settlement workflows.
- Used **NetBeans** for debugging claim logic and compliance reporting modules, ensuring integrations with reinsurers and payment networks on **AWS RDS and DynamoDB**.
- Integrated **RabbitMQ** with **Amazon SQS/SNS** for asynchronous messaging across modules handling claim updates, fraud alerts, maturity notifications and communications.
- Developed lightweight **microservices** in **Golang** with goroutines and channels for concurrency in APIs handling claims, premiums and portfolio adjustments deployed on **AWS Lambda**.
- Deployed APIs and Java EE modules on **AWS EC2 and API Gateway**, optimizing performance for quarter-end loads, settlements and renewals.
- Modeled operational data in **Cassandra and AWS DynamoDB**, capturing claims, policy behavior and payment patterns for high-volume analytical queries.
- Managed repositories with **GitHub and AWS CodeCommit**, applying branch governance, reviews and tagging across risk models and policy services.

- Tracked development blockers and issues via **GitHub Issues and AWS CloudWatch Logs**, supporting collaboration across underwriting, compliance and claims systems.
- Conducted **unit testing** with **Mockito**, validating backend services for premium accuracy, claim calculations, thresholds and fraud rules, integrated into **AWS CodePipeline test stages**.
- Enabled secure communication across hybrid systems using **AWS VPC, VPN and IAM**, encrypting sensitive transfers of policy and customer data.
- Configured **java.util.logging** with centralized routing to **AWS CloudWatch**, capturing claim logs, compliance audits and diagnostics for fraud monitoring and reconciliation.
- Authored detailed documentation in **Confluence**, including AWS-based deployment guides, rule onboarding and knowledge transfer for developers, compliance officers and insurance managers.

Client: Mastercard, St.Louis, United States **Dec 2012- Dec 2014**

Software Associate

Responsibilities:

- Supported sprint planning, grooming and delivery cycles in an **Agile** retail environment, contributing to 95% sprint completion rate through active participation.
- Engineered backend modules in **Java** using **Polymorphism** and **Encapsulation**, enabling reusable business logic for inventory and catalog management.
- Designed mobile-first retail pages using **HTML**, **CSS** and **Bootstrap**, ensuring **WCAG** compliance, semantic SEO optimization and a 30% faster design cycle for seasonal promotions.
- Integrated **Ajax** for dynamic price and availability updates, improving product page responsiveness and reducing bounce rates by 18%.
- Enhanced user interactivity with **jQuery**, handling real-time DOM updates for cart manipulation and promotional banners.
- Developed **SOAP/XML** services to synchronize POS data with backend systems, ensuring accurate pricing and transaction consistency.
- Automated builds using **Ant**, streamlining deployment workflows across QA and staging environments.
- Wrote optimized SQL queries in **MS SQL Server**, improving sales report generation time by 20% for end-of-day batch processing.
- Used **WebStorm** to debug JavaScript issues and streamline frontend component integration across product modules.
- Maintained source code with **Subversion (SVN)**, supporting collaborative development and controlled rollbacks.
- Managed bug triaging and resolution through **Bugzilla**, tracking regression and UAT feedback across sprint cycles.
- Executed API performance tests with **Apache JMeter**, validating checkout service stability under simulated high-volume sales load.

Education

- Bachelor of computer science in Sri Indu college of engineering, India.
