Ravichandran Palani
ravichandran.palani@yahoo.com
https://www.linkedin.com/in/ravichandran-palani/

PROFESSIONAL SUMMARY:

- 17+ years of experience in designing and developing enterprise applications using Java/J2EE, Spring Boot, ReactJS, and Microservices across Retail, Banking, and Healthcare domains.
- Expertise in Spring, Hibernate, Struts, and HCL Commerce, with strong skills in RESTful API, Microservices, and event-driven architectures using Apache Kafka and JMS.
- Proficient in ReactJS, Angular, JavaScript, HTML5, CSS3, and Redux Toolkit for building responsive and scalable front-end applications.
- Experienced in integrating Java/Spring Boot microservices with AWS services such as ECS, EC2, S3, RDS, DynamoDB, Lambda, API Gateway, and CloudWatch, enabling scalable containerized deployments, real-time monitoring, and seamless API integrations.
- Experienced in DevOps and CI/CD pipelines using Azure DevOps, Jenkins, Docker, Git, and Terraform for automated cloud deployments on AWS, Azure, and GCP.
- Skilled in Drools, Oracle, DB2, PostgreSQL, MongoDB, and integrating Azure services (App Services, AKS, Static Web Apps, Service Bus, Cognitive Search).
- Strong in OOP, Design Patterns, SDLC, and Agile methodologies with proven leadership, problem-solving, and cross-functional collaboration abilities.

TECHNICAL SKILLS:
Languages: Java 8, 17
Software Methodologies: Object Oriented Analysis & Design, UML, SDLC (Agile, Iterative, Scrum, Waterfall)
Web technologies: J2EE (JSP, Servlets), JSF, SOAP Web Service, REST Web Service (Spring), HTML 5, CSS 3, JavaScript, Angular, React JS TypeScript, Ajax, XML, WSDL, JSON
Java Frameworks: Spring 4.x, Spring Boot and Microservices, Hibernate 3.x, Struts 2.x, EJB, JPA, Jasper reporting, MQ, Solr Search, Elastic Search, HCL-Commerce V6, V7, V8, V9.1
Java Script Frameworks: Java script, jQuery, Node JS, Angular, Documentum.
Cloud Computing Platform: AWS (EC2, S3, Storage Gateway), Microsoft Azure, GCP
Server/Container: IBM WAS, JBOSS 6.x, Apache Tomcat 8.x, Node Server, Apache, IBM HTTPS server, Docker
Operating System: Windows, Linux (Redhat, suse), UNIX, Mac
Development Tools: Eclipse, IBM WCD(RAD), Visual Studio Code, DB Visualizer, TOAD, MS SQL Studio, Source Tree, Dbeaver, MS Visio, UMLet, SoapUI, iReport, Fiddler, HttpWatch, Firebug, Chrome Debugger, Rest clients
Configuration Management: VSS, TFS, MKS, SVN, GIT, Code Commit
File Transfer Tools: WinSCP, Filezilla
Build Tools: Angular CLI, Ant, Maven, Jenkins, YUI Compressor
Code Quality Tools: JS Lint, Sonar, PMD, Check style, Findbugs
Project management Tools: MPP, ManageMe, Greenhopper, Jira, Confluence, Version One
Other Tools/Products: OKTA, Solr Search, Dynatrace, Splunk, TIDEL(Data Load Jobs),
Defect Tracking Tools: Jira, HP QC, Bugzilla, MKS Defect Tracking
Database: DB2, Oracle 10g/11i, MYSQL, MS SQL
Document Management: MS Sharepoint, One Note

EDUCATION, CERTIFICATIONS & AFFILIATIONS:

- Bachelor of Engineering (BEng), Electronics and Communications Engineering from Anna University in 2002 – 2006.
- AWS Certified Solutions Architect - Associate
- IBM Certified Application Developer - IBM WebSphere Commerce V7.0
- IBM Certified System Administrator - IBM WebSphere Commerce V7.0

PROFESSIONAL EXPERIENCE:

Avnet Inc - Phoenix, AZ **Dec' 2024 - Present**
Role: Senior java Developer
Development and Implementation of First Service Portal (FSP) for Avnet for Americas, EMEA regions.

Roles/ Responsibilities:

- Designed and developed responsive and dynamic UI modules for product catalog, cart, checkout, and order history for the Avnet E-Commerce site using React.js, Redux Toolkit, Context API, and REST API integration.
- Implemented reusable React components and hooks to build scalable, user-friendly front-end solutions integrated with HCL Commerce backend services.
- Enhanced product discovery and filtering capabilities using dynamic search and client-side optimizations for improved UX.
- Developed custom Spring Boot RESTful APIs for pricing, shipping, delivery, and order management workflows.
- Implemented OpenAPI 3 specifications and integrated Kafka messaging to enable standardized, asynchronous communication between microservices.
- Consumed external APIs and ERP systems to ensure real-time pricing, inventory, and order synchronization.
- Integrated Java microservices with DynamoDB and other relational/NoSQL databases using JPA/Hibernate and JDBC for efficient data transactions.
- Implemented unit and integration testing for microservices using JUnit 5, Mockito, and measured code coverage with JaCoCo.
- Deployed React front-end applications on Amazon S3 and hosted Spring Boot microservices on AWS EKS and AWS Lambda for scalability and high availability.
- Integrated backend microservices with Amazon RDS, S3, Lambdas, and AWS Secrets Manager to build secure and cloud-native enterprise solutions.
- Implemented CI/CD pipelines using GitHub Actions for automated build, test, and deployment workflows.
- Developed Infrastructure as Code (IaC) using Terraform and Helm to provision and manage AWS resources consistently across environments.
- Managed sprints, user stories, and bug tracking using agile tools, ensuring effective collaboration between development and DevOps teams.
- Worked closely with cross-functional teams to deliver end-to-end features aligned with business goals and cloud architecture standards.

Environment: Java 8,17/J2EE, Spring, Spring Boot, Rest APIs, Struts, Hibernate, IBM/HCL Commerce V9.1, DB2, IBM/HCL Commerce Developer with RAD, Next.js, React JS, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Docker, AWS EKS, AWS Lambdas, Azure, GCP, Red Hat Enterprise Linux Server, JPA, Solr, Elastic Search, Red Hat Open Shift, HCL DX, Azure Cognitive Search, JUnit 5, Mockito, JaCoCo, Terraform, DynamoDB,

Bass Pro Shops - Springfield, MO **April' 2024 - Dec' 2024**

Role: Lead & Senior java Developer

Led and developed the Minimum Viable Product (MVP) for the eCommerce site of Bass Pro Shops Canada, leveraging HCL Commerce V9.1 to deliver core online retail capabilities tailored to the Canadian market

Roles/ Responsibilities:

- Developed and implemented React.js components and hooks for the Bass Pro Shops E-Commerce site, creating dynamic, responsive, and reusable UI modules integrated with Spring Boot APIs.
- Built React-based checkout and order history pages with pagination, conditional rendering, and state management using Redux Toolkit and Context API to enhance user experience and performance.
- Integrated React front-end with Elasticsearch APIs to enable real-time product search and filtering on Product Listing Pages (PLP).
- Collaborated with back-end teams to integrate RESTful APIs securely, ensuring seamless data flow between the React front-end and Java microservices.
- Developed custom Spring Boot RESTful APIs for pricing, shipping, delivery, and order management workflows, implementing OpenAPI 3 specifications for standardized service contracts.
- Integrated Kafka messaging to enable asynchronous, event-driven communication between microservices for orders, inventory, and notifications.

- Integrated Java microservices with DynamoDB, Amazon RDS, Redis, and other relational/NoSQL databases using JPA/Hibernate and JDBC for efficient and reliable data transactions.
- Implemented unit and integration testing for microservices using JUnit 5, Mockito, and monitored code coverage with JaCoCo.
- Deployed React front-end applications on Amazon S3 and hosted Spring Boot microservices on AWS EKS, AWS Lambda, and ECS for scalability, high availability, and performance.
- Implemented CI/CD pipelines using GitHub Actions, incorporating automated builds, security scans, and cloud infrastructure provisioning via Terraform and Helm.
- Developed Infrastructure as Code (IaC) using Terraform to provision and manage AWS resources (EKS, RDS, S3, Redis, networking), ensuring consistent, version-controlled environments for microservices.
- Designed and deployed scalable, fault-tolerant distributed systems leveraging Spring Boot microservices, Kafka messaging, Redis caching, and cloud-native AWS architectures to achieve high availability and system resilience.
- Worked closely with cross-functional teams to deliver end-to-end features aligned with business goals and cloud architecture standards.

Environment: Java/J2EE, Java 8–21, Spring, Spring Boot, Rest APIs, Struts, IBM/HCL Commerce V9.1, DB2, IBM/HCL Commerce Developer with RAD, Next.js, React JS, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Azure, Red Hat Enterprise Linux Server, JPA, Solr, Elastic Search, AWS (ECS, RDS, ElastiCache, S3, CloudFront), Splunk, Terraform, Kafka, JBoss Drools, Decision Tables, DRL, KIE Modules, DMN, RESTful APIs, Microservices, Kafka, JMS, Oracle, MySQL, PostgreSQL, Azure DevOps, Git, Maven/Gradle, Docker, Kubernetes.

BJs wholesale Club - BJS.com - Boston, MA **July' 2023 – March' 2024**
Role: Lead & Senior Java Developer
Description: BJs wholesale club bjs.com is designed and build on hcl commerce. Design and development of various sub-systems of HCL commerce for BJS.com. enhancement of cart, checkout, order and promotion modules.

Roles/ Responsibilities:

- Designed and developed the checkout flow customized for BJ's Wholesale Club eCommerce platform using HCL Commerce, utilizing Java, Spring Framework, and HCL Commerce APIs.
- Created and customized checkout commands, access beans, and data beans leveraging Java EE APIs and WebSphere Commerce APIs to extend and enhance core functionalities.
- Developed REST APIs in Java (JAX-RS / Spring Boot) to fetch promotion details from AWS DynamoDB and applied promotion logic on checkout pages during order calculations based on eligible items and part numbers.
- Worked extensively on design, coding, and customization of the order subsystem using Java EE components and WebSphere Commerce Order APIs, aligning with BJ's business requirements.
- Analyzed production incidents and resolved issues based on severity to maintain high availability and performance of the BJ's eCommerce platform, debugging using Java debugging tools and log analysis.
- Identified and fixed defects in the checkout flow, using Java JUnit for unit testing and integration testing in lower environments before production deployment.
- Implemented Apache Kafka to enable event-driven microservices in the Avnet portal, designing stream processing pipelines for order, inventory, and notification events, ensuring reliable and real-time data exchange across distributed systems.
- Handled batch job issues and monitored Stage Propagation processes, developed using Java batch processing APIs within HCL Commerce framework to ensure smooth data flow.
- Directly interacted with BJ's client stakeholders for Incident and Problem Management, providing timely updates and resolutions based on system logs and Java exception handling.
- Supported and troubleshot production issues, delivering timely solutions within SLA to ensure continuous availability and smooth operation of the eCommerce site, leveraging Java performance monitoring and profiling tools.
- Used Scalyr and AppDynamics along with Java Virtual Machine (JVM) monitoring tools to monitor application performance and troubleshoot production issues, ensuring high availability and optimal user experience.

- Involved in end-to-end coding, functional testing, and customization/enhancement of HCL Commerce base product using Java EE, Spring Boot, and WebSphere Commerce APIs to meet BJ's business needs.
- Addressed and resolved application-related issues by analyzing Java stack traces, performing root cause analysis, and implementing fixes to ensure smooth operations and user satisfaction on BJ's Wholesale Club eCommerce site.

Environment: Java/J2EE, Spring, SpringBoot, Rest APIs, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, Elastic, SpringBoot, AWS (ECS, RDS, ElastiCache, S3, CloudFront), Splunk, Terraform, Kafka, JBoss Drools, Decision Tables, DRL, KIE Modules, DMN, RESTful APIs, Microservices, Kafka, JMS, Oracle, MySQL, PostgreSQL, Azure DevOps, Git, Maven/Gradle, Docker, Kubernetes.

Tailored Brands Inc, Houston, TX, USA **Jan 2022 – June 2023**
Project: TMW Replatform
Lead Java Developer

Responsibilities:
- Designed and developed change requests for the Menswear House B2C site by leveraging Java/J2EE frameworks, Spring Boot, and IBM/HCL Commerce V8.0/V9.1 to ensure robust and scalable implementations.
- Developed and implemented modifications on the order items details page within the checkout flow using Java, Struts, and REST APIs, ensuring seamless user experience and smooth integration with backend systems.
- Integrated advanced analytics into the Menswear House site by utilizing Splunk for monitoring, JSON for data interchange, and HTTPS web services to securely transfer analytical data.
- Prepared detailed implementation tasks for the TMW Replat form v9.1 upgrade/migration, coordinating with Maven-based build tools and IBM/HCL Commerce V9.1 to streamline the upgrade process.
- Customized WebSphere Commerce (WCS) commands in response to change requests by leveraging Java, Spring, and IBM/HCL Commerce frameworks, which enhanced system flexibility and performance.
- Created and customized checkout commands along with access and data beans using IBM/HCL Commerce integrated with JPA and Oracle, ensuring efficient data processing and secure transactions.
- Developed and optimized the checkout flow by utilizing Spring Boot, Angular, and Struts, improving overall site performance and customer experience.
- Conducted thorough code and design reviews employing Developer with RAD and Jenkins for continuous integration, ensuring adherence to industry best practices and high-quality code standards.
- Fixed defects and rigorously tested the checkout flow in lower environments using SOAP-UI and unit testing frameworks, ensuring reliable functionality prior to production deployment.
- Actively engaged in end-to-end development processes including coding, unit testing, and functional testing, leveraging Java/J2EE, Angular, and REST APIs for robust application performance.
- Contributed to the customization and enhancement of the base product by integrating IBM/HCL Commerce with advanced tools such as JPA and Elastic, resulting in improved product performance and scalability.
- Efficiently managed and resolved application-related issues using monitoring tools like Splunk, along with support from Red Hat Enterprise Linux Server and Oracle, ensuring minimal downtime and prompt error resolution.

Environment: Java/J2EE, Spring, Spring Boot, Rest APIs, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce, Angular, XML, SOAP, Jenkins , Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, Elastic, Java Server Pages, XML, Web Services, JWT, Maven, RAD and Oracle.

JPMC, Houston, TX, USA **Jul 2021 - Dec 2021**
Project: TRRI Feed
Lead Java Developer

Responsibilities:
- Designed and developed a robust solution for processing TRRI data into the JPMC back-end system using Java/J2EE, Spring Boot, and IBM WebSphere, ensuring reliable and scalable data integration.
- Developed a dedicated Java API to efficiently read and parse XML data, leveraging Spring and REST APIs for seamless integration with the back-end system.

- Built controller and service classes using Spring Boot and Struts to manage XML data ingestion, ensuring clean separation of concerns and maintainability.
- Created a Spring Boot project that not only read XML data but also processed and persisted it into the backend database using JPA and Oracle, ensuring data integrity and performance.
- Designed and implemented database triggers to automatically handle TRRI data, subsequently generating Excel files for reporting and analysis using integrated tools.
- Designed, developed, and maintained business rules using the JBoss Drools Rule Engine, enabling dynamic decision-making and reducing hard-coded logic in enterprise applications.
- Actively participated in code and design reviews using Developer with RAD and Maven-based workflows to ensure adherence to best practices and high-quality standards.
- Identified, fixed, and rigorously tested defects in lower environments using SOAP-UI and Splunk, ensuring smooth checkout flow and overall system stability.
- Engaged in comprehensive coding, unit testing, and functional testing phases, utilizing frameworks like Angular, React JS, and REST APIs for enhanced user interaction and system responsiveness.
- Contributed to the ongoing customization and enhancement of the base product, integrating advanced technologies such as Solr, Elastic, APIGEE, and Swagger to improve overall functionality.
- Managed and resolved application-related issues using monitoring and logging tools, including Splunk and HTTPS web services, ensuring prompt error resolution and minimal system downtime.

Environment: Java/J2EE, Spring, Spring Boot, Rest APIs, React JS, Angular, Struts, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, Elastic, APIGEE, Swagger, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle.

HP Inc, Austin, TX USA **Jun 2020 - Jun 2021**
Project: HP2B
Lead & Sr. Full Stack Java Developer

Responsibilities:

- Designed and developed change requests for the HP2B B2B site by utilizing Java/J2EE, Spring Boot, and IBM/HCL Commerce V8.0/V9.1 to deliver efficient and scalable business solutions.
- Developed and implemented changes on the order items details page in the checkout flow using Struts, REST APIs, and Angular, ensuring a seamless and user-friendly transaction process.
- Integrated analytics into the HP2B site by leveraging Splunk for monitoring and Swagger for API documentation, ensuring data-driven decision-making and system transparency.
- Prepared detailed implementation tasks for the HP2B WCS v9.1 upgrade/migration, coordinating with Maven, IBM/HCL Commerce Developer with RAD, and IBM WebSphere to streamline the transition process.
- Customized WCS commands in response to change requests by using Java, Spring, and IBM/HCL Commerce frameworks, enhancing system flexibility and functionality.
- Created and tailored checkout commands along with access and data beans using JPA and Oracle, resulting in improved data processing and secure transaction handling.
- Developed and optimized the checkout flow with the help of Angular, CSS, HTML, and ReactJS, improving both performance and user experience.
- Actively engaged in rigorous code and design reviews using GitHub, Jenkins, and RAD to maintain high-quality standards and adherence to best practices.
- Identified and resolved defects while performing thorough testing in lower environments using SOAP-UI and Splunk, ensuring a robust checkout flow.
- Participated in all phases of the software development lifecycle—coding, testing, and functional testing—with tools like Spring, REST APIs, and HTTPS web services for comprehensive product development.
- Contributed to the customization and enhancement of the base product by integrating modern technologies such as Solr, JWT, and Red Hat Enterprise Linux Server, leading to improved system capabilities.
- Demonstrated expertise in network-level security, ensuring that security protocols are integrated and maintained across the HP2B platform.
- Efficiently handled all application-related issues and errors, utilizing AWS, DB2, and Oracle alongside continuous integration tools to ensure system reliability and minimal downtime.

Environment: Java/J2EE, Spring, Spring boot, Rest APIs, Angular, CSS, HTML, Reat JS, Swagger, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, GitHub, Jenkins, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle.

Academy Sport & Outdoors, Houston, TX, USA **Dec 2019 - May 2020**
Project: Academy.com
Lead & Sr. Full Stack Java Developer

Responsibilities:

- Designed and developed the Academy.com e-commerce platform, implementing key modules such as checkout, add to cart, payment, shipping, inventory, and order management services.
- Utilized Java/J2EE, Spring Boot, Spring Cloud, and Microservices architecture to build scalable, high-performance backend systems.
- Developed and exposed RESTful APIs to enable seamless communication between backend microservices and the ReactJS-based front-end UI.
- Implemented Apache Solr for browse functionality, including index building, data loading, and catalog search, enhancing product discovery and response times.
- Deployed applications on Google Cloud Platform (GCP), leveraging cloud services for scalability, monitoring, and load balancing.
- Configured CI/CD pipelines using Jenkins, automating build, test, and deployment workflows for continuous delivery.
- Performed end-to-end testing, logging, and performance monitoring using Postman, Splunk, and Dynatrace for high availability and reliability.
- Collaborated with cross-functional teams to deliver secure, cloud-native, and customer-centric e-commerce solutions, improving checkout efficiency and overall site performance.

Environment: Java/J2EE, Spring, Spring boot, Rest APIs, Angular, React JS, CSS, HTML, React JS, Swagger, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, GitHub, Jenkins, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle

Walgreens, Deerfield, IL, USA **Apr 2017 - Dec 2019**
Project: Software Life Cycle Virtualization
Senior Java Developer & Lead.
SLV - Software Lifecycle Virtualization is the use of virtualization in the pre-production portion of the software life cycle. It is the ability to capture and simulate the behavior, data and performance characteristics of dependent systems and/or components, that are either currently unavailable or are in an unusable state, in development or testing regions.

Responsibilities:

- Designed and developed software lifecycle virtualization (SLV) modules for pre-production applications using Java/J2EE, Spring Boot, Spring MVC, Spring Core, and Spring Data JPA.
- Developed and virtualized RESTful and SOAP-based Web Services, enabling seamless integration between internal and third-party systems within the SLV platform.
- Designed and implemented microservices using Spring Boot and Hibernate ORM, deployed on Azure App Services for scalable and cloud-native operations.
- Built front-end components using ReactJS, JavaScript, and jQuery to provide dynamic and interactive user interfaces for the SLV application.
- Designed technical architecture and detailed design documents, including service contracts, entity mappings, and API specifications for SLV modules.
- Implemented business logic to post and process XML/JSON requests and responses, ensuring smooth interoperability between services and external systems.
- Integrated Azure services such as Azure SQL Database, Service Bus, and Storage Accounts with Java applications to enhance performance, reliability, and scalability.

- Performed unit, integration, and functional testing, participated in code and design reviews, and ensured high-quality, secure code delivery.
- Diagnosed and resolved application defects in lower environments, contributing to continuous improvement and smooth deployments.
- Ensured application and network-level security using Spring Security, JWT, and Azure Key Vault, safeguarding data and maintaining compliance across environments.

Environment: Java/J2EE, Spring, Spring boot, Rest APIs, Angular, CSS, HTML, React JS, Swagger, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, GitHub, Jenkins, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle

Academy Sport & Outdoors, Houston, TX, USA **May 2016 - Mar 2017**
Project: Academy.com
Sr. Full Stack Java Developer

Responsibilities:

- Designed and developed the gift card payment method for checkout, leveraging Java/J2EE, Spring Boot, and IBM/HCL Commerce V8.0/V9.1 to deliver a seamless payment experience.
- Integrated the gift card system with First Data, the designated vendor for ASO gift cards, by implementing HTTPS web services and customized payment plugins to ensure secure and efficient transactions.
- Customized the gift card payment plugin for seamless integration with the ASO gift card system using IBM/HCL Commerce Developer with RAD, ensuring compatibility and enhanced functionality.
- Created and tailored checkout commands along with access and data beans using JPA and Oracle, streamlining the processing of gift card transactions within the checkout workflow.
- Developed and implemented gift card authorization on the order confirmation page and balance inquiry functionality on the order details page using REST APIs and XML-based communication.
- Developed request/response XMLs using JAXB in WCS as per vendor specifications and implemented the logic to post and process these XMLs from the gift card vendor, ensuring data accuracy and consistency.
- Integrated the WCS gift card system with the RTS payment gateway to facilitate secure communication with First Data, employing HTTPS web services and JSON for smooth interoperability.
- Customized the order XML to incorporate gift card changes and implemented a BOD service to support gift card functionality from the payment device, ensuring comprehensive transaction support.
- Developed robust error handling for gift card scenarios, using SOAP-UI and Splunk for monitoring, to display user-friendly error messages during checkout.
- Participated in rigorous code and design reviews using GitHub and Jenkins and resolved defects through thorough testing in lower environments to ensure high-quality releases.
- Engaged in end-to-end coding, testing, and functional testing while actively customizing and enhancing the base product; additionally, implemented network-level security protocols using AWS and Red Hat Enterprise Linux Server to safeguard transactions.

Environment: Java/J2EE, Spring, Spring boot, Rest APIs, Angular, CSS, HTML, Reatc JS, Swagger, Struts, IBM/HCL Commerce V8.0, V9.1, DB2, IBM/HCL Commerce Developer with RAD, JSP, JSTL, JSON, SOAP-UI, Splunk, HTTPS web services, AWS, Red Hat Enterprise Linux Server, JPA, Solr, GitHub, Jenkins, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle

The Home Depot, Austin, TX USA **Feb 2015 - May 2016**
Project: Homedepot.com
Sr. Full Stack Java Developer

Responsibilities:

- Architected and developed the end-to-end checkout flow using Java/J2EE and Struts, ensuring a streamlined and robust transaction process.
- Architected and developed Home Depot's e-commerce checkout and browse modules using Java/J2EE, Spring, Struts, JSP, and EJB, ensuring seamless, secure, and high-performing transactions.

- Utilized Spring Framework features such as Spring MVC, Spring Core, Spring Security, and Spring Data JPA to develop scalable, maintainable, and secure RESTful APIs.
- Implemented Solr search for browse and catalog features, including index building, data loading, and product retrieval, improving search accuracy and response time.
- Integrated DB2 and Cassandra databases for order, inventory, and session management, optimizing query performance and scalability.
- Developed REST APIs using Spring MVC and JSON, and enhanced performance and security with Dynatrace, Splunk, JMeter, and Spring Security.

Environment: Java/J2EE, Struts, Spring, IBM WCS V7.0, DB2, IBM WCS Developer with RAD, JSP, JSTL, Tomcat, WebSphere, JSON, Rest API, Cassandra, JMeter, Post Man, Splunk, Dynatrace, Gomez, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle

State of Missouri, USA **Nov 2013 - Feb 2015**
Project: UI-MOD Employment security and Unemployment Insurance - State of Missouri
Sr. Full Stack Java Developer & module Lead.

Responsibilities:
- Led the module as a Senior Java Developer, interfacing directly with customers for gap analysis and requirement gathering for the Out of State Module, utilizing Java/J2EE to drive project success.
- Engaged in end-to-end coding, testing, and functional testing while integrating Struts with databases using IBM WebSphere and JBoss, ensuring robust and maintainable solutions.
- Implemented Struts tag libraries (html, logic, tab, bean) within JSP pages to streamline UI development and improve the overall user interface.
- Developed comprehensive system documentation including case diagrams, class diagrams, database table designs, and mapping between relational tables using DB2 and Oracle, laying the groundwork for scalable architecture.
- Developed Action classes and Action Forms, incorporating both commons and custom validators along with Struts client-side JavaScript validation to ensure data integrity and user-friendly error handling.
- Integrated project components on application servers such as IBM WebSphere and JBoss, facilitating seamless deployment and reliable runtime performance.
- Actively created and managed problem tickets, analyzed code issues, and implemented fixes to address application errors, ensuring continuous improvement and system reliability.
- Maintained a strong focus on network-level security, leveraging JWT and other best practices to safeguard sensitive data across all project components.
- Developed Action classes and Action Forms & performed validations using commons, custom validator and Struts client-side JavaScript validation.

Environment: Java/J2EE, DB2, Web sphere, Struts, Hibernate, Jboss app server, Workflow Drools, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle

PRIOR EXPERIENCE:

Senior Full Stack Java Developer **Oct 2011 – Oct 13**
Target Corp, USA.
Project : Target (www.target.com)
Environment: Java/J2EE, Java Server Pages, Spring, Struts, JSTL, EJB, IBM WebSphere Commerce V6.0, DB2, WCS Developer with RAD, XML, SOAP Web Services, JWT, Maven, SQL and DB2, Control-M, TeamSite, Solr Search.

Full Stack Java Developer **Jun 2010 – Sep 2011**
Wipro
Project: VF Corp - The North face(www.thenorthface.com)
Environment: Java/J2EE, Java Server Pages, Struts, JSTL, EJB, IBM WebSphere Commerce V6.0, DB2, WCS Developer with RAD, XML, SOAP Web Services, JWT, Maven, SQL and DB2.

Java Developer **Nov 2009 – May 2010**

UST Global
Project : Carrefour India Customer & Supplier Portal.
Environment: Java/J2EE, Java Server Pages, Struts, JSTL, EJB, IBM WebSphere Commerce V6.0, DB2, WCS Developer with RAD, XML, SOAP Web Services, JWT, Maven, SQL and DB2,

Java Developer **Mar 2007 – Mar 2009**
Coromandel Infotech India Ltd.
Project: Smart Connect (Micro Finance), Finacle - Core Banking Solutions
Environment: JAVA/J2EE, Struts, Spring, Hibernate, MySQL, Java Server Pages, XML, Web Services, JWT, Maven, IBM WebSphere, RAD and Oracle, Linux.
