Thulasi Ram – Java Developer
thulasiram.javaaws@gmail.com
+1 (281) 939-6255
LinkedIn URL : https://www.linkedin.com/in/thulasiram-naidu-m-b-358562237/

Profile Summary:

- 10+ years of experience in **Java/J2ee** Technologies as a developer involved in all phases of **Backend Development** and specializing in **Spring Boot, Microservices, and RESTful web services**. Proven track record in delivering robust, scalable, and high-performance applications across various domains.
- Experience in development of, **Hibernate (ORM), JSP, JSF, JSTL, Spring 3.x, Spring Boot 2.0, EJB, JMS, Web Services (SOAP, REST) and Microservices.**
- Extensive experience with **Amazon Web Services, EC2, S3, Amazon RDS, DynamoDB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, AWS Identity and Access Management, AWS Cloud Watch, Amazon EBS, and CloudFront.**
- Experience in Java technologies which include **Java Collections, Interfaces, Synchronization, Serialization, IO, Exception Handling, Java Beans, REST API, and WSDL.**
- Experience in design and development of web-based applications using **Java 8/11, JDBC, SQL, JSTL, JSP, XML, Java API and Spring Boot 2.**
- Having good knowledge on and implementing functional styles of **Java 8/11 Lambda Expressions and functional interfaces, parallel Streams.**
- Extensively worked to build **Model-View-Controller (MVC)** and multi-tier Client/Server Architecture using Design Patterns like **Business Delegate, DAO, Data Transfer Object, Factory, Abstract Factory, Builder, Singleton and Decorator, Command Pattern, Strategy Pattern.**
- Experience in using various spring modules such as **Spring MVC, Spring Batch, Spring DAO/ORM, Spring Transaction handling, Spring AOP, Spring JMS and Spring Context, Spring data JPA.**
- Expertise in installing and setting up **Splunk** monitoring tools. Experienced in using build/deployment tools like J**enkins, Docker, and AWS for CI/CD of Microservices** and messaging tools like **Active MQ and Kafka**.
- Experience in designing **User Interface (UI)** applications using**, AJAX, HTML 5, JavaScript, CSS 3, Java Server Pages (JSP).**
- Experience with the ORM tool **Hibernate, Spring Data JPA** involving Connection pooling, Mappings, Transaction Management, **HQL (Hibernate Query Language)**.
- Experience in implementing SOA (Service Oriented Architecture) using Web Services (**SOAP, WSDL, Restful, and JAX- WS**) and **REST Services.**
- Experience in building and deploying Apache **Ant/Maven** scripts for deployment and customizing **WAR/JAR** file management for web applications.
- Experience in **Log4J, Slf4j** for extensible logging, debugging and error tracing.
- Expertise in database modeling, administration and development using **SQL and PL/SQL in Oracle, MySQL, MongoDB** and **SQL Server** environments.
- Experience in designing and developing **Amazon EC2, Amazon S3, Route 53, DynamoDB, Lamda, SNS, SES.** Worked with version control systems like **GIT and SVN.**

- Experience in **SDLC** under **waterfall** as well as **Agile** model for web and thick client-based applications under java and web technologies-based platform.
- Strong communication, collaboration & team building skills with proficiency in grasping new technical concepts quickly.
- Having knowledge in using Tomcat web server and application servers such as JBoss & WAS 8.0.
- Self-starter always inclined to learn new technologies and Team Player with very good communication, organizational and interpersonal skills.

Technical Skills:

Languages	JAVA, J2EE, SQL, PL/SQL
Databases	SQL Server, MySQL, Oracle 10g/11g/12c, MySQL, NoSQL – Cassandra & MongoDB, Neo4j
Web Technologies	JSP, JSTL, JSON, Servlets, XML, HTML, CSS, XSLT, JSF, JavaScript.
J2EE Technologies	Struts, Spring, JDBC, JNDI, EJB, Java Beans.
Web Servers	Tomcat, IBM Web Sphere Commerce Application Server
Web Services	REST, SOAP, WSDL
Operating Systems	Windows, Unix and Linux
Development Tools	STS, IntelliJ, Eclipse Neon2, NetBeans, IntelliJ,
Frameworks	Spring 4.x/3.x, Hibernate 3.x/4.x, Spring Boot
Design Patterns	Singleton, Model View Controller and Front Controller.
Cloud	AWS EC2, S3, Lambda, Step Functions.
Version Controls	SVN, GIT
Messaging Queue	Kafka, AMQ, WMQ
SDLC Methodologies	Agile, Waterfall and Scrum Models

Professional Experience:

Client: JPMC - Texas **Sep'24 – Till Date**

Role: Java Developer /Full Stack Engineer

Responsibilities:

- Responsible for the analysis, documenting the requirements and architecting the application based on **Java/J2EE** standards.
- Implemented **Spring Boot Micro Services using Kafk**a as messaging queue to consume the upstream messages.
- Used **java 8/11** features like stream, Lambda expressions, functional interface, collections, Date/Time changes and type annotations.
- Migrated spring boot application from **java 8 to java 11/17** and **spring boot from 2.5 to 3.2** using open rewrite.
- Implemented spring boot application to consume file from different sources and pushing them to **snowflake data** base and creating Qlik reports.
- Managed **AWS lambda functions and step functions** to consume files and parse and push them to snowflake data base.

- Implemented Automated database change management to code at full speed & continuously deliver through **Liquibase**.
- Part of prod supports monitoring **AutoSys** jobs monitoring EC2 Auto Scaling and load balancing.

Environment: Java 8/11, spring, Spring Boot, Liquibase, Kafka, JSON, XML, RESTful, Micro-services, AWS EC2, Lambda, Step Functions, Snowflake, Qlik Dashboard, Maven, SQL, Agile and Windows.

Client: UPS - Texas **Oct 2023 – Sept 2024**
Role: Java Developer
Responsibilities:

- Responsible for the analysis, documenting the requirements and architecting the application based on **Java/J2EE** standards.
- Developed **Micro Services using Spring boot** rest API's.
- Implemented Spring Boot Micro Services using **Kafka as messaging queue to produce the messages** to downstream.
- Used **java 8/11** features like stream, Lambda expressions, functional interface, collections, Date/Time changes and type annotations.
- Involved in designing and implementation of **multi-tier** applications using **Spring Boot 2.0.**
- Developed and Implemented **micro services** applications using **Spring Boot.** Deployed Spring Boot based **micro- services** and **Amazon EC2** container using **AWS.**
- Involved in web application development for backend with cutting edge **HTML5 and CSS3** techniques.
- Involved in writing **JSP and Spring Action, DAO** classes. Used **JSTL** Tag library **(Core, Logic, Bean and HTML taglibs)** to create standard dynamic web pages.
- **Hibernate** DAO classes were developed to retrieve and save data using **spring framework** manager classes.
- Involved in developing the persistence layer using **Hibernate** framework.
- Responsible for pagination for the application by integrating **Spring** framework with **Node.JS.**
- Involved in developing **Java APIs**, which communicates with the **Java Beans**.
- Implemented **Java/J2EE Design patterns** like **Business Delegate and Data Transfer Object (DTO), Data Access Object.**
- Used **JSP** for presentation layer, developed high performance object/relational persistence and query service for entire application utilizing Hibernate.
- Written application level code to interact with **RESTful Web APIs**, Web Services using **AJAX, JSON, XML and JQuery.**
- **Log4J** is used for logging purposes and debug levels are defined for controlling the log.
- Used **Maven** automated build scripts to compile and package the application.
- Written **SQL queries,** stored procedures modifications to existing database structure as required per addition of new features.
- Followed **AGILE** (SCRUM) methodologies, had sprint planning every two weeks and set up daily meetings to monitor the status.
- Participated in the status meetings and status updating to the management team.

Environment: Java 8/11, spring, Spring Boot, Hibernate, Kafka, HTML5, CSS3, JavaScript, Bootstrap, JSP, AJAX, JSON, XML, RESTFul, Micro-services, AWS EC2, Lambda, DAO, JBOSS, EJB, Log4J, Maven, SQL, Agile and Windows.

Client: IBM **Aug 2021 – Sep 2023**
Role: Java/J2EE Developer
Responsibilities:

- Involved in Requirements gathering, analysis and design and documentation as the application was started from scratch.
- Developed Java 8 code base, to increase performance and code readability.
- Maintained Interface compatibility and concurrency in the project using Java 8 new features like default, static methods and Concurrency API.
- Implemented Spring Boot Micro Services using **Kafka** as messaging queue to consume the upstream messages.
- Implemented Spring Boot Micro Services using Kafka as messaging queue to produce the messages to downstream.
- Implemented **CURD API's using Cassandra** as backend data base.
- Used Java 8 Method References feature to point to methods by their names and used functional Interfaces.
- Designed and developed Spring Boot adapter applications using Rest **API**.
- Implemented Spring Boot services in combination with Angular as front end to form a Micro-service Oriented application.
- Involved in design and development of server side layer using **XML, JSP, JDBC, JNDI, EJB** and **DAO** patterns using Eclipse **IDE**.
- Developed UI and implemented event handling using **AJAX, JQuery** and JavaScript for more interactive web pages.
- Implemented all the components of Spring Framework (Controller classes, Spring Bean Configuration file (dispatcher- servlet.xml).
- The DAO Pattern and **J2EE** framework facilitated the integration and deployment of DAO and JSP.
- Involved in using JPA (Java Persistence API) frameworks and APIs such as JDO (Java Data Objects) and Hibernate.
- Involved in development of Hibernate objects for data fetching for batch and front-end processing.
- Used AJAX in suggestive search and to display dialog boxes with JSF and **DOJO** for some front end.
- Involved in developing **Java APIs**, which communicates with Java Beans.
- Created several JSP's and populated them with data from databases using **JDBC** and Developed many **JSP** pages, used **JSON** plug-in for asynchronous communication.
- Used Java Multi-Threading concept for downloading files from a URL.
- AWS services such as **EC2**, Elastic Beanstalk, **Elastic Search, Cloud Watch, CloudFront, Cloud Formation**, and IAM were utilized to design and deploy high-availability and fault-tolerant applications.

- Used Log4j to provide a central logging facility. Jenkins used to deploy code to AWS as a plug-in. Understanding of **DevOps**
- Designed database and created tables, wrote the complex SQL Queries and stored procedures as per the requirements.
- Implemented the project under Agile Project Management Environment and followed **SCRUM** iterative incremental model and configured various sprints to execute.

Environment: Java 8, spring, Spring Boot, Kafka,Hibernate, HTML5, CSS3, JavaScript, DAO, JSP, JSON, REST, EJB, Log4J, SQL, Agile and Windows, Kubernetes, jQuery, JavaScript, Kafka, XML, AWS, HTML5,CSS3, AJAX, JSON, Java8, Eclipse, Tomcat-9.0, WebSphere 9, Bootstrap, Spring Boot, SVN, hibernate framework, Maven build tool.

Client: AMEX, (LTI Mindtree), India **May 2018 – Aug 2021**
Role: Java/J2EE Developer
Responsibilities:

- Involved in analyzing the specifications provided by the client and converting the specifications into the use cases.
- Involved in the design of the Referential Data Service module to interface with various databases using JDBC.
- Involved in the application development using JAVA/J2EE, Hibernate, and spring, EJB, JMS and WebSphere.
- Implemented the application using Spring Framework which is based on Model View Controller design pattern.
- Created Action classes and used spring related features like Validations and Action Messages.
- Used JavaScript and spring validation framework for performing front end validations.
- Used Micro-services architecture, with Spring Boot based services interacting through a combination of REST and Spring Boot.
- Develop new extensions to mobile Java / J2EE ecommerce platform using spring Boot.
- Developed web application using JSP custom tag libraries. Designed Java Servlets and Objects using J2EE standards.
- Developed JSP's with Custom Tag Libraries for control of the business processes in the middle-tier and was involved in their integration.
- Integrated Hibernate ORM framework with spring framework for data persistence and transaction management.
- Involved in designing and developing the front end of the application using JSP, Java script, AJAX, HTML5, CSS3.
- Involved Java Multithreading to cascade multiple changes on multiple records in only one transaction and developed a batch process framework. Responsible for implementing new enhancements and fixing defects using Java, JSP, spring and Hibernate. Developed Session beans which encapsulate the workflow logic and used Hibernate to access data

- Created Stateless Session EJB for retrieving data and Entity Beans for maintaining User Profile.
- Used JBoss and WebSphere as an application server to deploy the code.
- Used LOG4J and JUnit for debugging, testing and maintaining the system state.
- Used Maven automated build scripts to compile and package the application.
- Involved in creating and extracting data from databases using SQL Queries, PL/SQL Stored procedures, triggers, packages on Oracle database.
- Performed a thorough unit testing and resolved several data related issues before migration to production.

Environment: J2EE, spring, Spring Boot, Hibernate, HTML5, CSS3, JavaScript,, AJAX, JBOSS, EJB, Log4J, JUnit, Ant, SQL and Windows.

Client: Cisco (Wipro), India **Jan 2015 – Apr 2018**

Role: Java Developer

Responsibilities:

- Hands on experience in Web Application Development using Client Script design technologies like **jQuery** as well as **HTML, CSS, XML, Java Script.**
- Worked on **Neo4j data base** to create rest API's to perform curd operations.
- Involved in coding front-end components using J2EE, MVC, JSP, JSF, jQuery, and AJAX.
- Worked on core java and java Collections concepts to implement the business logic.
- Designed, developed, and configured server side J2EE components like EJB, Java Beans, and Servlets.
- Wrote EJB POJOS for fetching patient SDE information.
- Designed and Developed java batches using spring batch framework.
- Extensive experience in Struts Tag Libraries and Custom-tag implementations in JSP to embedded business logic.
- Optimized the design using patterns like DAO, Factory, Singleton, Service Locator and Business Delegate. All code was written using the RAD.
- Mapped POJO (plain old java objects) to the tables already created in the database using the *. Hbm.xml files.
- Designed and Developed Web Services using WSDL, SOAP to communicate to the other modules and used SOAP UI for testing the web services.
- Wrote stored procedures, complex queries using PL/SQL to extract data from the database, delete data and reload data on Oracle 10g database using the Toad tool.
- Involved in Junit Testing on various modules by generating the Test Cases Involved in building and deploying projects using Hudson and do end-to-end testing.
- Used CVS as a version control for applications.

Environment: HTML, CSS, JavaScript, AJAX, jQuery, Core Java, J2EE 6.0, MVC, EJB, JSP, JSF, SOAP, WSDL, Struts, DOM, PL/SQL, JDBC, XML, Oracle 10g, ANT, Web Services, Hudson, Eclipse, SOAP UI 4.0, Grunt, Jasmine, JBoss 6.0, RAD, CVS.
