PROFESSIONAL SUMMARY

- Accomplished software developer with 11+ years of experience in the development and implementation of web applications using **Python, Flask, FastAPI, Django, RESTful APIs**.
- Experience in **Python, Java, C++, Java Script, ReactJS, Flask, FastAPI, Django, RESTful Web services, NumPy, Pandas, gRPC, Protocol Buffers, REST API's, Microservices, HBase, Redis, Big Query, Big Table, MySQL.**
- Proficient in Generative AI, Chat GPT.
- Experience in Front end technologies **HTML, CSS, java script, AJAX, React JS** and **JSON**.
- Strong experience in programming and object-oriented design.
- Experience in **C++, Java, Hadoop, Big data,** object-oriented and distributed applications.
- Experience in the development and implementation of large application software systems.
- Certified in Big Data and Hadoop development echo system.
- Experience in design and development of applications in Artificial Intelligence (AI), Automobile, Telecom, CRM, finance, and Industrial automation verticals using Agile, SCRUM Methodologies.

TECHNICAL SKILLS

Technical Skills: Python, C++, Java, HTML, CSS3, JavaScript, React JS, Angular JS, Node JS, XML, SQL, Pl/SQL.
Frameworks: Generative AI, Chat GPT, Docker, Kubernetes, Flask, FastAPI, Django, RESTful Web services, Big data, Hadoop.
Database: MySQL, SQL Server, Oracle 12g, MongoDB, Google Big Query, Google Spanner
Tools / Services: PyCharm, Eclipse, unittest, GitHub, SVN, ClearCase, Agile Scrum, Apache Tomcat, Jenkins, HP PLM, Jira, Maven, Amazon Web Services (AWS), Google Cloud Platform (GCP).
Programming and Design: Data structures and algorithms, OOP Design, Design Patterns
Methodologies: Agile, Scrum, Test Driven Development, RAD and Waterfall.
Operating Systems: Linux, Windows, Mac.

PROFESSIONAL EXPERIENCE

Google Jul 2018 – Present
Role: **Python Developer**
Sunnyvale, CA

Building Micro service-based issue management system application software to manage organization ticketing, Business process automation, approvals, API and User Management. Provides multiple channels like email, chat, UI, APIs to manage customer issues/tickets.

Responsibilities:

- Working as per Agile Methodology (Scrum) to meet project timelines with quality deliverables.
- Working closely with product owners to gather business requirements and create user stories.
- Working on Google GUTS Application, Email Engine, API, DB Schema, Remedy and Data-QA processes features using application framework API and REST.

- Developing the application API and User Interface using Python, Django, Java, HTML5, CSS3, JavaScript, Angular JS, Remedy, SQL and Google Cloud Platform (GCP).
- Experience in building and architecting multiple Data pipelines, end to end ETL and ELT process for Data ingestion and transformation in GCP and coordinate task among the team.
- Working on GenAI, V3 API, email engine and developing internal tools for data migration and verification using Java.
- Work on bug fixing and parallel run for conversion of PL/SQL procedures.
- Developing the application API and User Interface using **Python, Flask, FastAPI, Java, HTML5, CSS3, JavaScript, Angular JS, Remedy, SQL, Google Cloud Platform (GCP), Docker, Kubernetes**.
- Builds and develops new products and services that provides functions as-a-service using GCP.
- Create processes that enhance operational workflow and provide positive customer impact.
- Participate in complete software application development life cycle including Business and technical analysis, design, coding, unit testing, implementation and documentation of solutions for new development, system enhancements, and production support**.**
- Using ORACLE, SQL, Remedy and PL/SQL for the database development and configuration.
- **Environment**: Python, Django, unittest, Flask, Java, Angular JS, JavaScript, html, CSS, Remedy, Oracle, Google Perforce, SQL, Google Big Query, Google Spanner.

Cisco Systems Sep 2016 – Jun 2018
Role: **Software Developer** Bangalore, India

Cisco Finesse Agent desktop is application software used to manage agents and its state transitions throw-out customer experience. Consists of Conference, Consult, Monitor Agents, Supervisor, admin, Agent to agent chats and other Gadgets.

Cisco Unified Contact Center – Enterprise (UCCE) is distributed systems application software used to manage customers, partners of a contact center / customer care for high scale and high volume of customers.

Responsibilities:

- Enhanced the Cisco Finesse, web services and UI modules for UCCE and Cisco Finext applications.
- Developed a web based REST application using **Python**, **Django, pySpark, Java, HTML, CSS, React JS, JavaScript, Amazon Web Services (AWS), Docker, Kubernetes and Jenkins** to give a summary of all the Orders and Products in the Siebel application that had not completed the ABO life cycle.
- Enhanced the modify quotes and order feature based on the cardinality defined in the product and promotion structure.
- Create operational workflows and person based applications using AWS stack..
- Implemented features in **Flask and RESTful.**
- Fixed customer issues and internal bugs raised in in-house testing.
- Developed Edit Promotion UI using **Java, HTML, CSS, React JS and JavaScript.**
- Participate in design and code review sessions as appropriate; to ensure the quality of work delivered by teammates is in accordance with development standards.
- **Environment**: Python, Flask, unittest, Java, C++, ReactJS, JQuery, Ajax, Sql Server, html, CSS, JavaScript, Oracle, OATS, Selenium, SOAP, RESTful, GitHub enterprise.

Oracle Corporation May 2014 – Sep 2016
Role: **Software Developer** Bangalore, India

Oracle Siebel Financial Services allows employees such as customers, salespeople, and call center agents to create and manage leads, opportunities, quotes and orders through their entire life cycle. Siebel Financial Services can be tightly integrated with back-office systems, allowing users to perform tasks such as offers, checking credit and confirming availability, as well as monitoring the fulfillment process. Financial Services allows Accounts, Contacts, Leads, Opportunities, quotes, and orders to be created based on a customer's account. Performing Analytics helps to identify customers and improve their experiences, analyzing logs, recommending products, services, validating transactions, and identifying interests that helps to increase the sales revenue.

Responsibilities:

- Enhanced the Oracle Siebel CRM application web service module for financial services that Inserts or updates the product information in the Siebel business application as sent by the third-party application.
- Enhanced the Oracle Siebel application framework and web service modules for financial services.
- Developed applications and REST API endpoint using **Python**, **Flask**, **C++, Java, HTML, CSS, JavaScript, Jenkins and Test Autimation** to give a summary of all the Orders, Opportunities and Products in the Siebel application.
- Enhanced the modify quotes and order feature based on the cardinality defined in the product and promotion structure.
- Developed web services using Flask and Django.
- Implemented features in **Flask, Django and RESTful.**
- Fixed customer issues and internal bugs raised in in-house testing.
- Developed Edit Promotion UI using **Java, HTML, CSS and JavaScript.**
- **Environment**: Python, Flask, JQuery, Ajax, Sql Server, html, CSS, JavaScript, Oracle, Fusion Middleware, OATS, Selenium, SOAP, RESTful, ClearCase.

Samsung Jan 2012 – Apr 2014
Role: **Software Developer** Bangalore, India

NextGen Network Camera Software – Open SDK – aims to develop the Software Development Kit (SDK) targeted for Samsung IP Cameras. Provides a platform for any 3rd party developers and helps to create applications exclusively for Samsung IP based camera(s). Developers can Create/Maintain, Upload/Install, Upgrade/Uninstall, Start/Stop camera applications using SDK software.

Surface Mount Technology – OLP Software involves the development and maintenance of application software used to manage the chips placement machine (Chip-Mounter) using SMT technology. The application majorly focuses on the surface mount machines (Chip mounters) in the production line. Goal of the project is to increase productivity by programming the chip-mounter and process the request more effectively.

Responsibilities:

- Involved in the implementation of application software using **C++**, **Java, Python** and python frameworks.
- Performed end to end development of new enhancements and resolved defects in the applications.
- Developed rich client interfaces using **HTML, JavaScript, AJAX**.
- Mentor and perform code review for peers in a team to ensure quality.
- Preparing Test Cases and Unit testing of various modules of the system.
- **Environment:** Python, C++, Java, html, CSS, JavaScript, AJAX, PyUnit, Selenium

EDUCATION

Bachelor of Technology [Electronics and Communications Engineering]
Jawaharlal Nehru Technological University, Hyderabad.
2007
